

GeoNames Map Explorer iOS MANUAL

GeoNames Map Explorer iOS App is a feature rich mapping app that focuses on allowing users to maintain situational awareness and get around a foreign town/city. It uses the NGA's Foreign Geonames data and USA GeoNames data in highly optimized data delivery formats both online and offline. This allows display of the data as well as advanced searching and even spatial search/filtering. It supports an offline D-DIL environment via defining a custom area of interest that builds all the required map data, databases and audio recordings. Advanced map viewer with support for Turn by Turn Navigation and bearing and distance. Support for user loaded GIS Map data. The map includes OSM vector tile basemap with style picker and many optional vector overlays like International Boundaries/Borders, Global Administrative Boundaries, TimeZones, GRIDS (MGRS/GARS), US States and Urban Areas.

(Winner of the 2020 IGAPP Grand Challenge Competition)

Home Screen

GeoNames Map Explorer home screen has following buttons:

- Map
- AOI Requests
- Manual
- About App
- User PDF Documents
- GPS Tracker
- Currency Converter
- Travel Advisories
- US Embassies
- Emergency Contact
- Translators
- Reference Information
- GeoNames Contact

Map

(the map defaults to offline mode if you've loaded an AOI you can toggle back to online internet connected mode or click AOI's on the top to switch regions)

On clicking on the Map button opens the map. The map page has following features:

- GeoNames - to show points on the map
- Offline/ Online toggle button
- Search - Online
- Placemarks
- Device Data
- Online Layers
- Geonames Search
- Navigation Menu
- AOI's
- OSM Styles
- More Info - popup

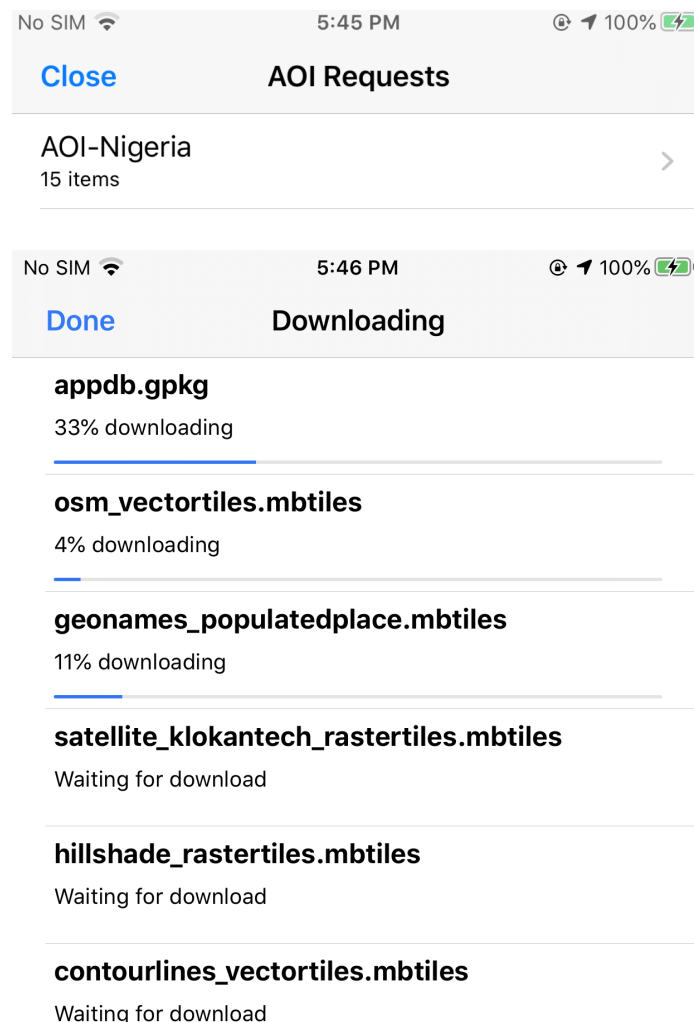

Downloading Offline Map and App Data

AOI- Area of Interest Requests

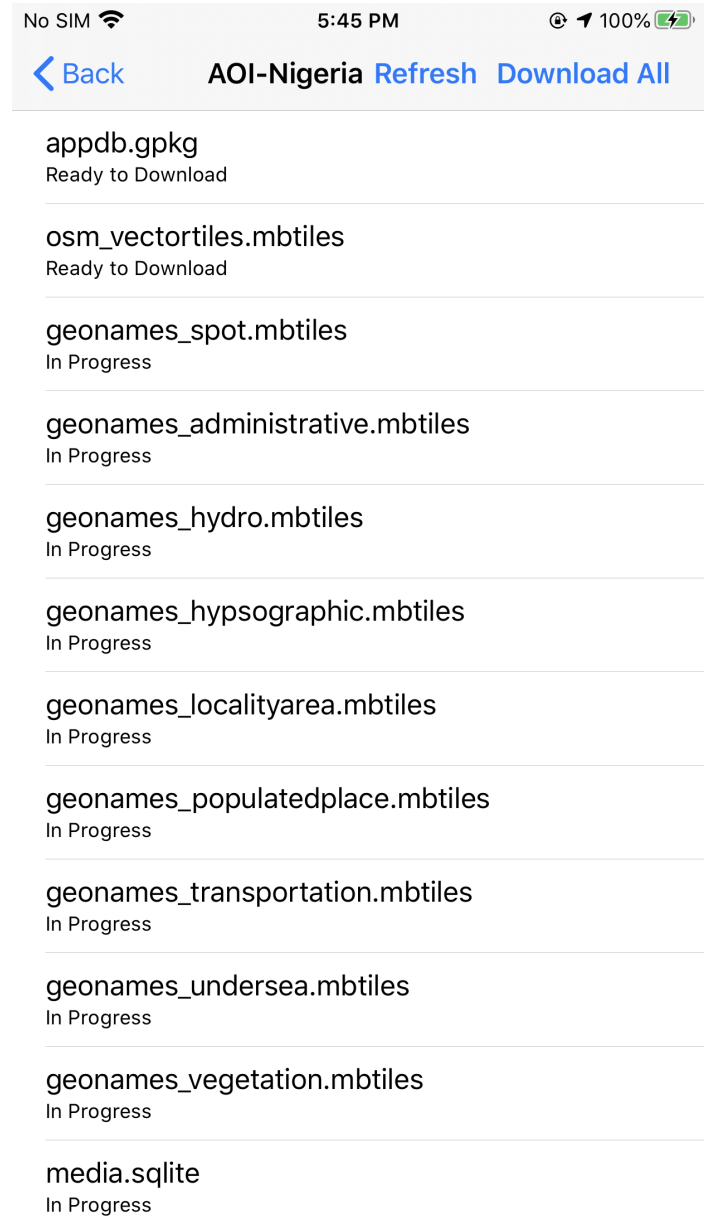

The user can select data to download from the map explorer and can use geonames and several features offline. The working of AOI Request button is as follow:

- List of requests
- On clicking specific request
- After saving AOI, close the map and go back to the menu screen where you click on 'AOI Requests'.
- You can select your specified AOI Requests and click on the 'Download All' button.
- The page will display the available requests

Clicking Specific Request On

- Download progress of the specific request will be displayed
- List of files to be download will also be displayed

Required Files:

There is NO option to select these by default these will be downloaded when you click download

- appdb.gpkg - geonames database (this is used for all the searching and popup information)

We include full values from the lookup tables instead of abbreviations

- media.sqlite - recordings database with MP3's stored in blob field
- - osm_vectortiles.mbtiles - OpenStreetMap Vector Tiles Basemap

GeoNames vector tiles (mbtiles) for each Feature Class (9) - this is how the data is displayed on the map users can turn on/off which ones they want to see by default it shows all)

The data has been designed with Scale Dependency/Zoom Level information built in based on the Display Field in the GeoNames Database

- Geonames_administrative.mbtiles
- Geonames_hydro.mbtiles - Hydrographic
- Geonames_hypsographic.mbtiles
- Geonames_localityarea.mbtiles
- Geonames_populatedplace.mbtiles
- Geonames_spot.mbtiles
- Geonames_transportation.mbtiles - Streets, highways, roads, or railroad
- Geonames_vegetation.mbtiles
- GeoNames_undersea.mbtiles

Optional Files:

You have to Manually Select these files for them to be downloaded.

- `contourlines_vectortiles.mbtiles`
- `Hillshade_rastertiles.mbtiles`
- `Satellite_klokantech_rastertiles.mbtiles` - satellite is low resolution 0-13
- `Gadm.gpkg` - this enables a new map widget showing Level 2 Country, Locality/Placename breakdown for where your center point of the map is located

Manual

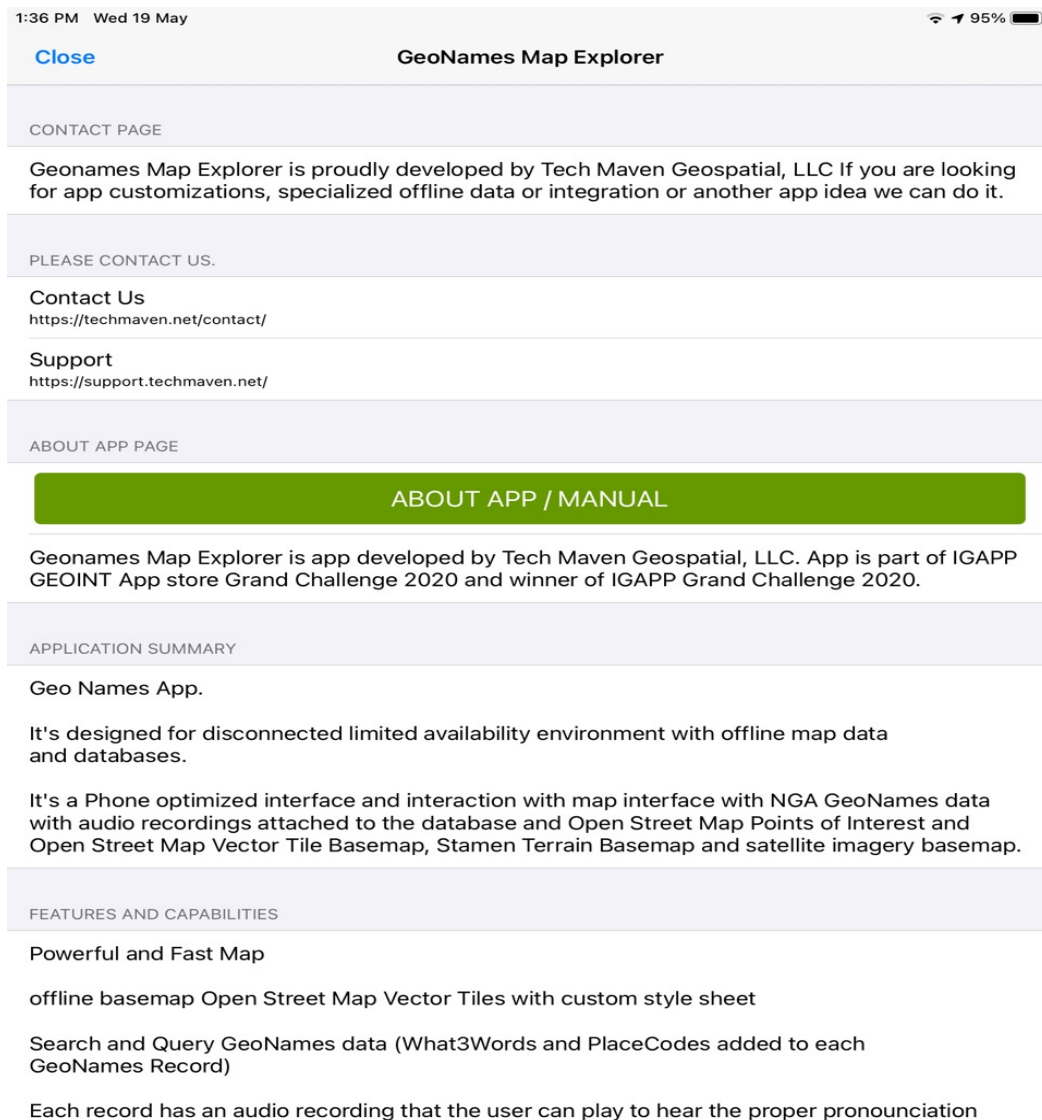

The Manual button click opens the about app pdf documentation that provides help to users about the application.

About App

The About App button click opens the panel that has several options:

- Contact page
- Support us option
- User manual
- Application summary
- Features and capabilities of the application

User PDF Documents

On clicking the User PDF Documents a page opens that asks the user to copy pdf files inside the GeoNamesMapExplorer folder so that the user can view documents as well.

GPS Tracker

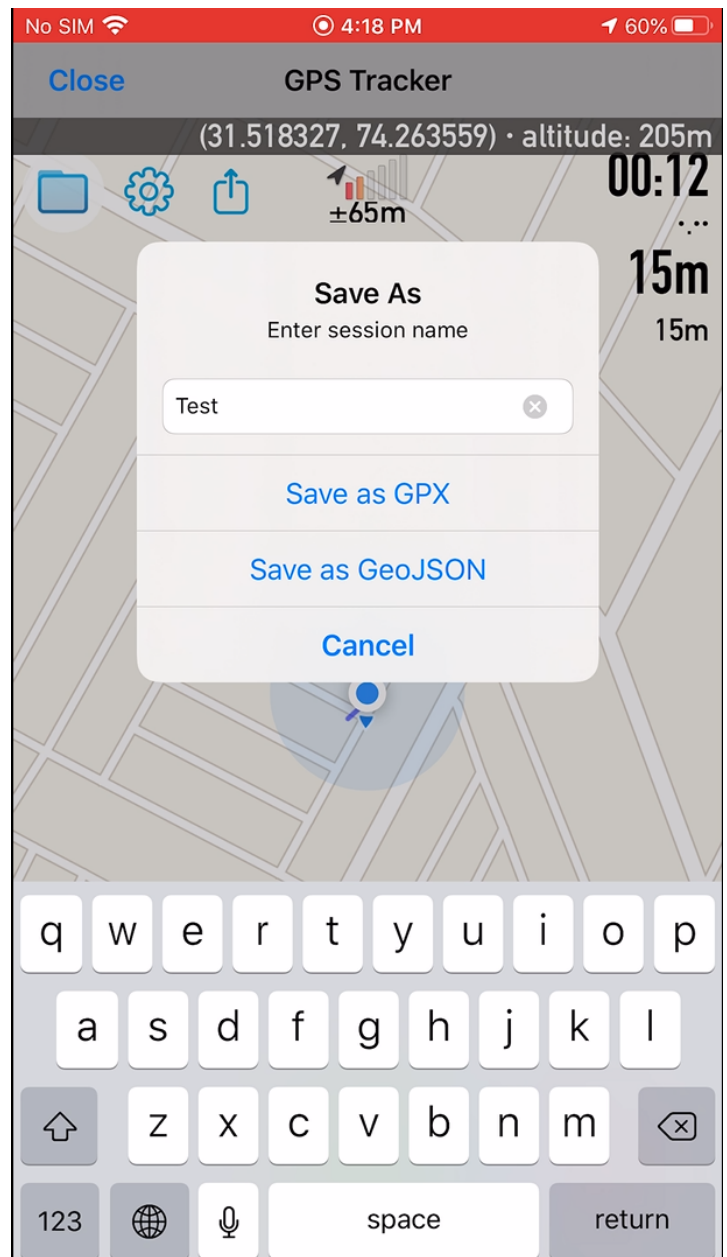

Note: This runs as a background process so you can start recording and leave this screen and it will still be recording.

On clicking the GPS Tracker button, it opens a separate map screen where user can perform multiple operations as follow:

- Start tracking, save tracking results, reset tracking, update location, drop a point/waypoint

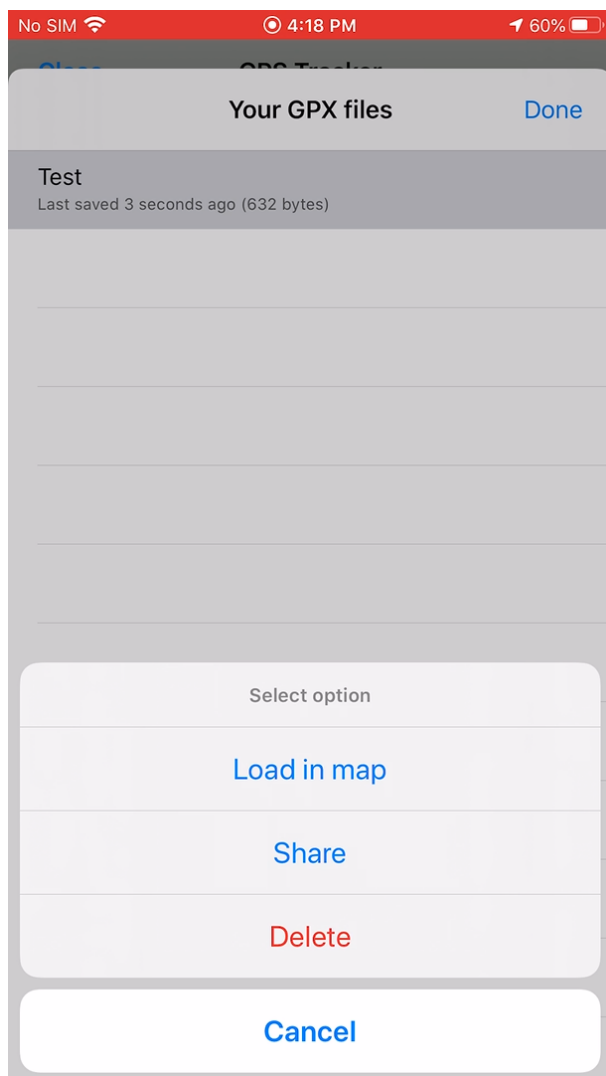

Click on the 'Start' button . Your location captures start on map and

after clicking on pause, you can save it as **GPX** and **GeoJSON** both.

Display distance, coordinates and time and tracking information in a map with the Use of multiple map sources (**Apple Maps**, **Open Street Maps**, **CartoDB**, **OpenTopoMap**).

- Now load in the map, so it can be shown on the main map.

Currency Converter

Currency Convert is an online feature that will convert currency from one currency to another currency with an easy and user-friendly interface.

Travel Advisories

Travel Advisories is a great feature that guides user about the travel and tours, the interface of this page is defined below:

- The page opens with a bunch of countries
- User selects a specific county for travel
- This opens the information of that specific country
- The details provided to users are related to - Travel transportation, health, local laws and special circumstances, safety and security, entry exit requirements and security, destination description, travel embassy and consulate description and many relevant things.

Road Conditions and Safety: Exercise strong caution while driving and drive defensively.

- Be aware emergency response services are inadequate. First responders have limited medical training and equipment. Accident victims are often transported to the nearest hospital in the car of a passerby.
- Road conditions are especially poor in rural areas in winter months and during inclement weather.
- Do not travel at night. Travel outside of urban areas is particularly dangerous.
- Fuel and repair services are common in populated areas, but there is no formal roadside assistance. Tires and replacement parts may not be available.

Traffic Laws: You may be asked to show your passport in addition to your driver's license if stopped. Police should provide you with a written ticket and receipt for any fine issued.

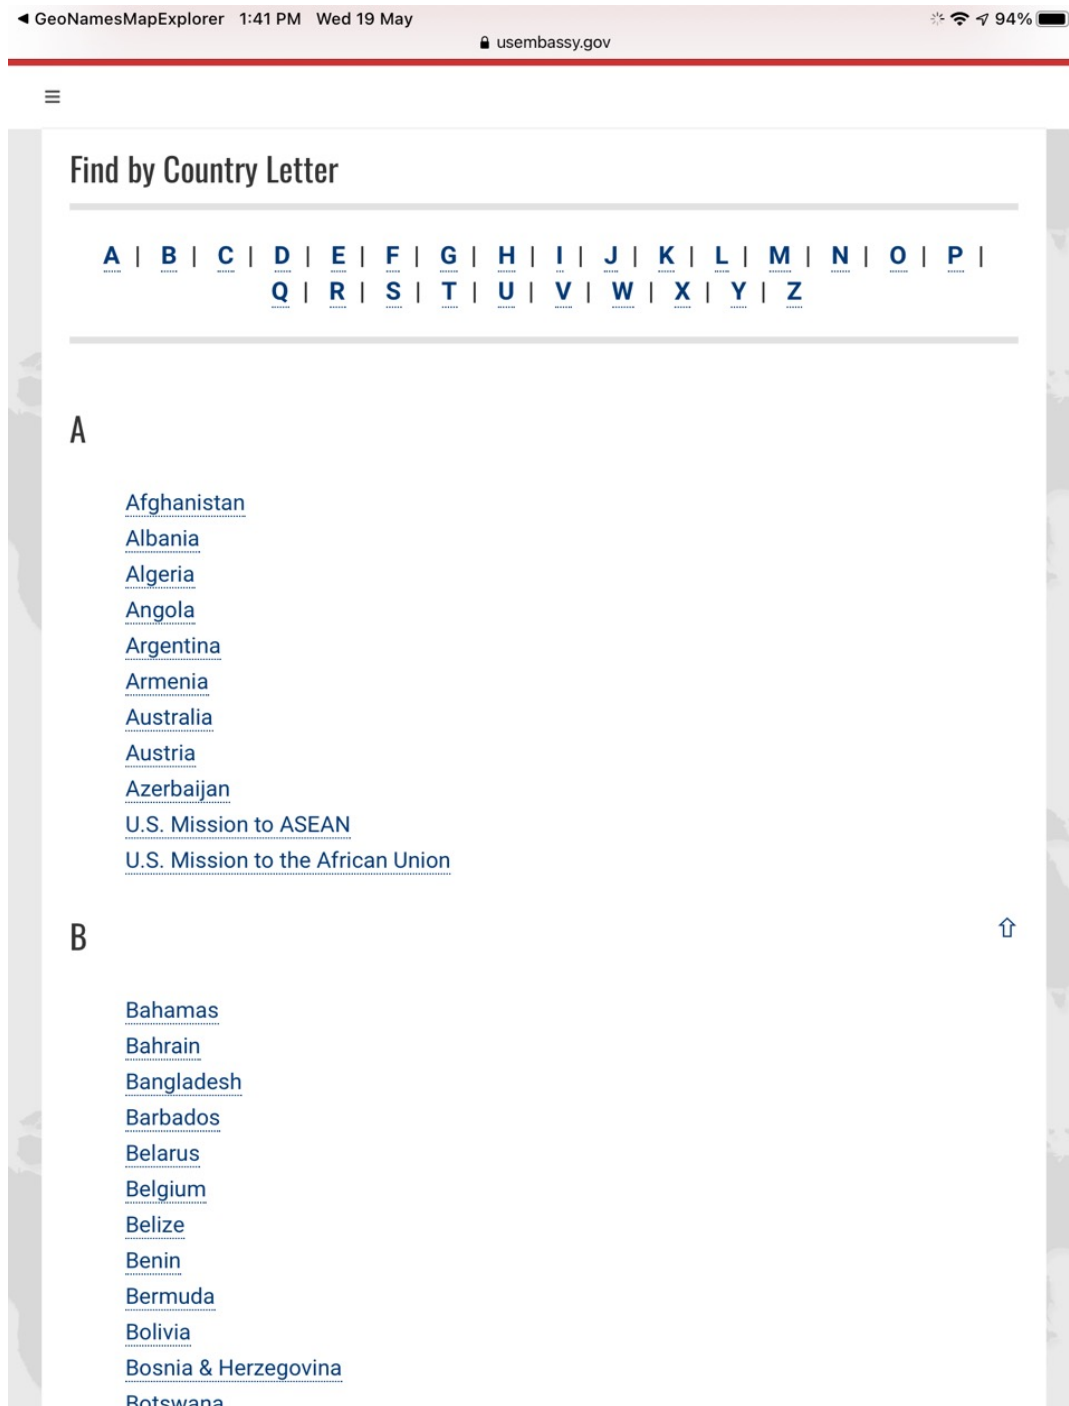

- If you have an accident, do not move your

US Embassies

On clicking the US Embassies button, it opens a menu where user can get details about two different things:

- Embassies of US Department
- US Embassies and Consulates

Map - Features

The Map comes with several features which makes this app more useful for the users, the list of features are:

- Online search - online mode
- Geonames search - offline mode
- Select area of interest
- Select OSM style - offline
- Geoname toggle button
- Offline toggle button
- Measure tool - length and area
- Geolocation button
- Add place-mark on map
- Change Layers - online
- Navigation menu

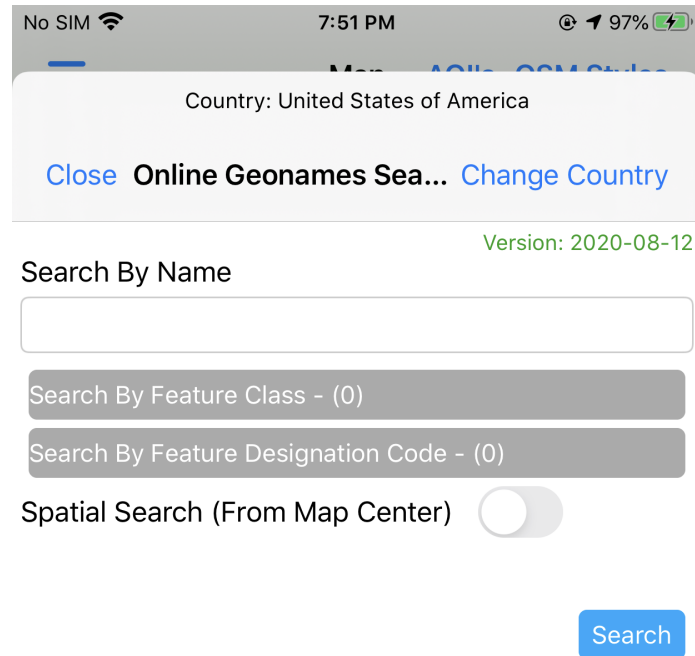

Online Search

- Toggle must be set to online mode
- Select one or more Feature Classes and the Designated Codes are Filtered based on that Selection.
- There are 9 Feature Classes administrative_region, Locality_area, populated_places, spot,streets_highways_roads_railroad, undersea, vegetation, hydrographic, hypsographic

Search Steps:

- Select a Country (Change Country you can have a default Country)
- Optionally, Search by Name
- Filter by Feature Class and Feature

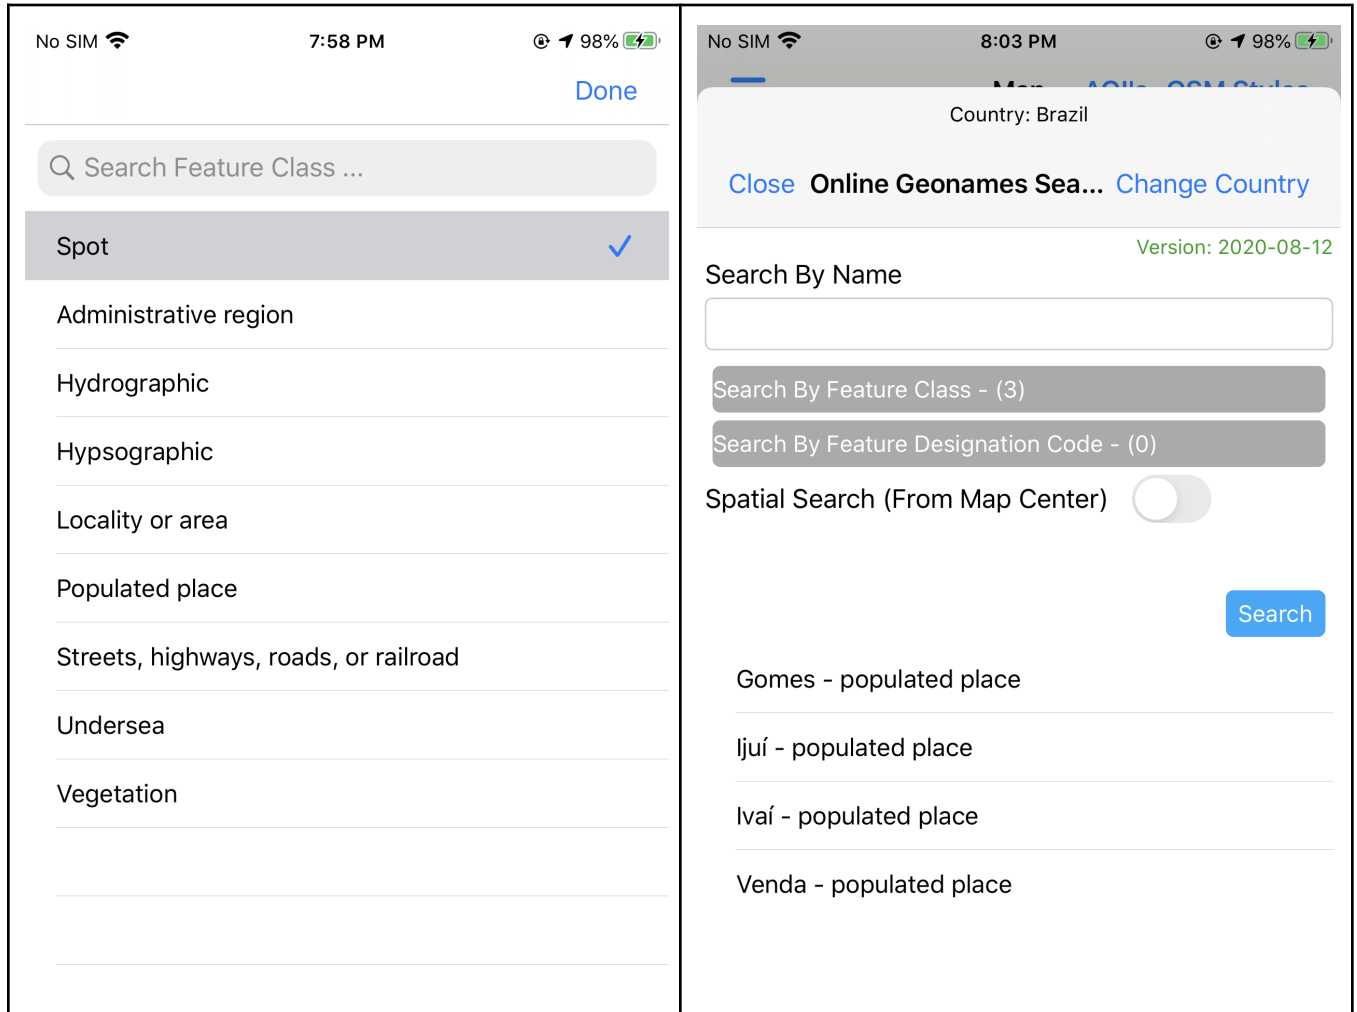

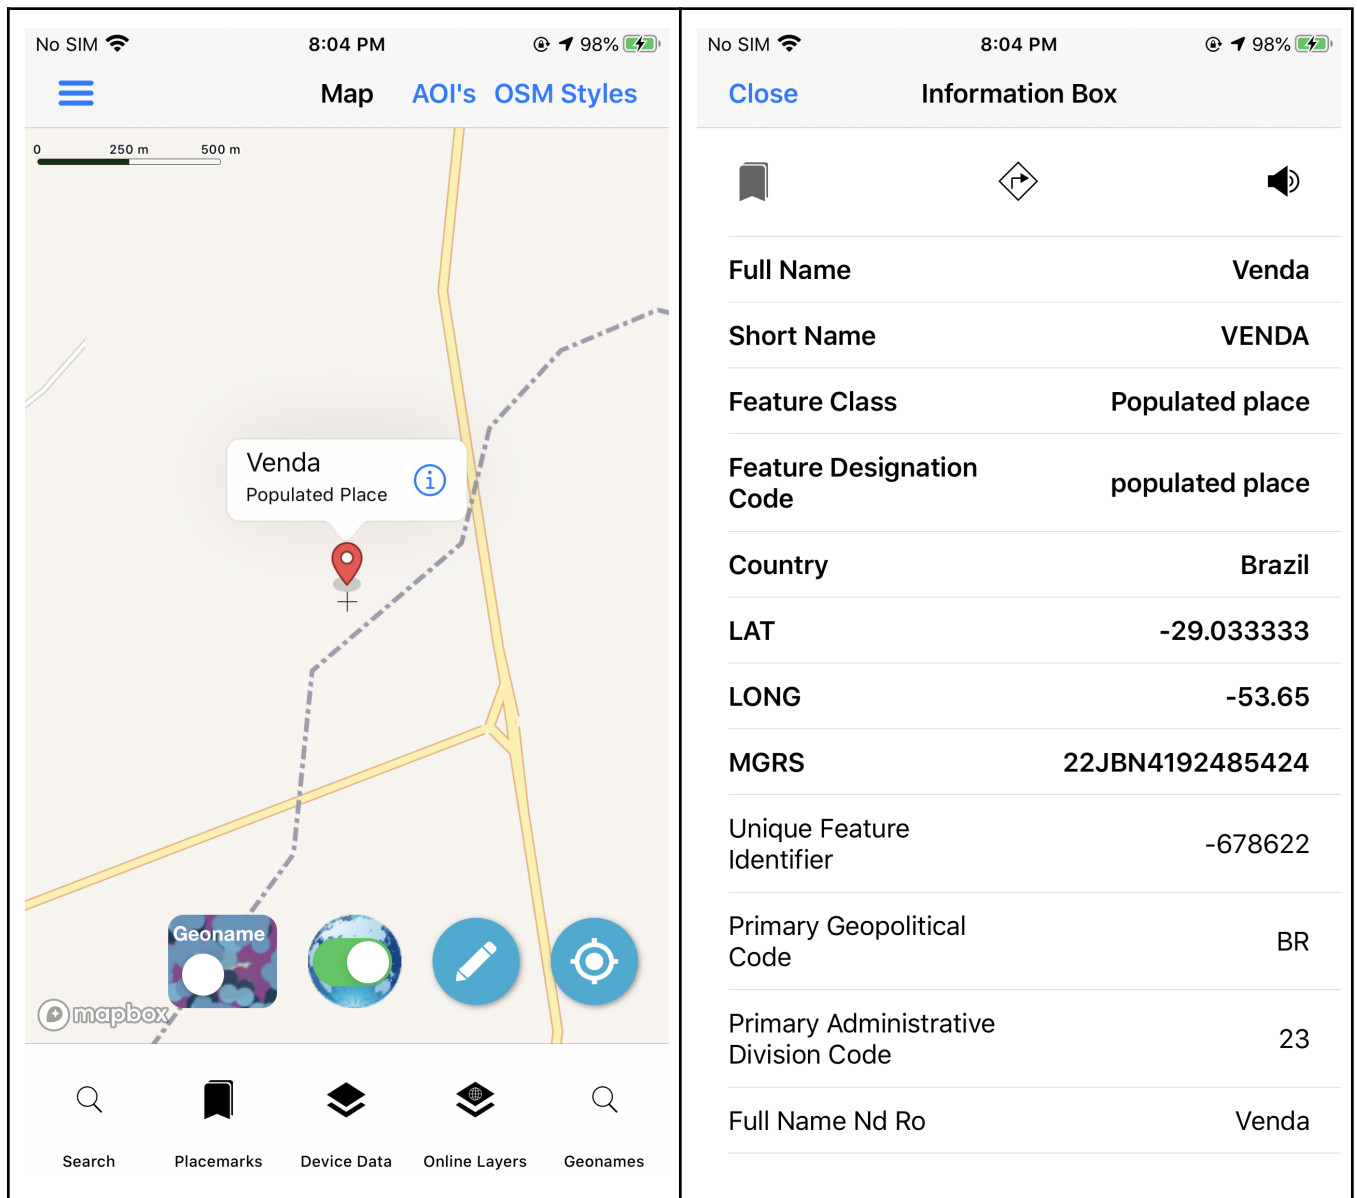

The screenshot shows the search interface of the GeoNames Map Explorer iOS app. At the top, a status bar displays 'No SIM', signal strength, time '7:51 PM', location services, and battery at '97%'. Below the status bar, a modal dialog is open with the text 'Country: United States of America'. Inside the dialog, there are links for 'Close', 'Online Geonames Sea...', and 'Change Country'. Below the dialog, the text 'Version: 2020-08-12' is displayed in green. The main search area includes a 'Search By Name' label above a text input field. Below the input field are two grey buttons: 'Search By Feature Class - (0)' and 'Search By Feature Designation Code - (0)'. At the bottom left, there is a toggle switch for 'Spatial Search (From Map Center)', which is currently turned off. A blue 'Search' button is located at the bottom right.

Designated Code:

- For USA Domestic Geonames TMG has added FeatureClass but there is NO Feature Designated Code

-

Geonames Search

The app has both Online and offline searching for NGA's Foreign GeoNames Database and USGS Domestic Geonames (GNIS).

- Offline (lower right geonames button)
- You can do a text search, filter by Feature Class and Feature Designated Code
- For offline geonames and spatial search(Offline) needs offline data
- You must have an active AOI (downloaded the AOI Request and be in offline mode toggle)

Select OSM Style

This control works with both the default internet connected vector tile OpenStreetMap basemap (from OpenMapTiles hosted by Tech Maven Geospatial) as well as the optional offline data.

The app includes support for the following Styles:

- Bright
- Toner
- Positron
- Dark Matter
- Klokantech
- Klokantech 3D

3 styles for use with other basemaps below the OSM vector tiles so those styles have Opacity settings/transparency for the polygons:

- Bright
- Dark Matter
- Klokantech

Note: There is a toggle to turn off the OSM Basemap. If you load a Raster Tile Basemap from the Basemap Picker you will NOT see it unless you've either turned off the OSM Basemap or switched the style to one with Opacity

Search Placemarks Device Data Online Layers Geonames

Search Placemarks Device Data Online Layers Geonames

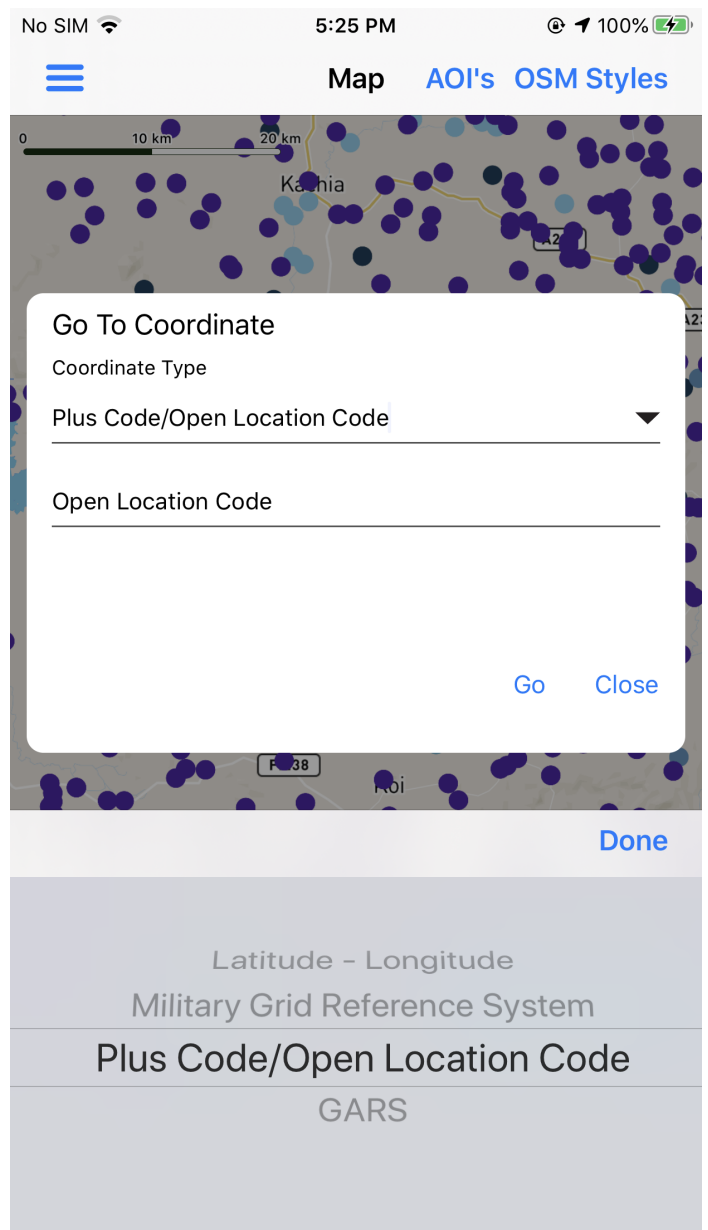

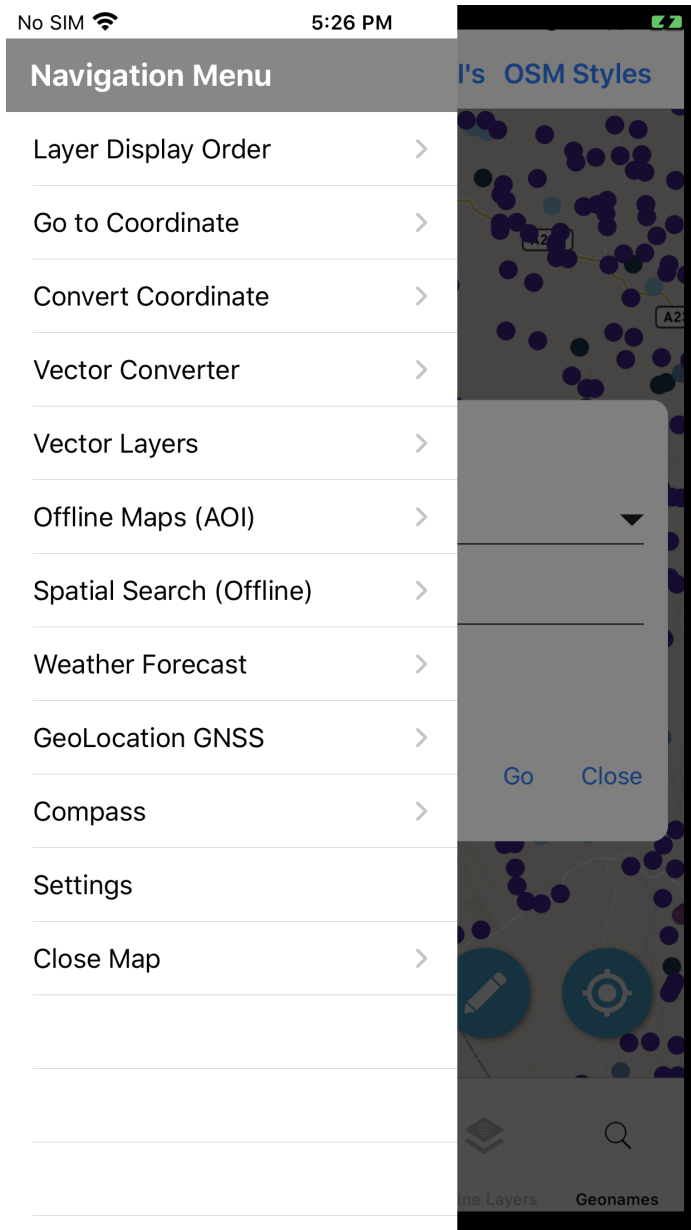

Go to Coordinates

This is a search form that allows users to quickly get to coordinates or grid cells.

- Latitude Longitude (WGS 84 Decimal Degrees)
- MGRS
- GARS

Note: future versions will include What3Words, PlaceKey

Coordinate Converter

Convert between different coordinate systems

- MGRS to/from Lat Long WGS84
- GARS to/from Lat Long WGS84
- What3Words to Lat Long WGS84
- It also supports projected coordinate/spatial reference systems

The screenshot shows the 'Coordinate Converter' app interface on an iPhone. The status bar at the top indicates 'No SIM', '5:35 PM', and '100%' battery. The app's title bar includes a 'Close' button, the title 'Coordinate Converter', and a refresh icon. Below the title bar is a blue header for the 'Coordinate Transformation Panel'. The panel contains two dropdown menus: 'Base Coordinate System' (set to 'WGS84 Geographic Coordinate System') and 'Target Coordinate System' (set to 'GARS Coordinate System'). Below these are input fields for 'Latitude' and 'Longitude', both with placeholder text 'Please Enter Latitude' and 'Please Enter Longitude' respectively. At the bottom of the panel, there are up and down arrow icons and a 'Done' button. Below the panel is a list of coordinate systems: 'WGS84 Geographic Coordinate System', 'Projection Coordinate System', 'MGRS Coordinate System', 'GARS Coordinate System' (highlighted), 'PLUS Coordinate System', and 'What3Words Coordinate System'.

Vector Converter

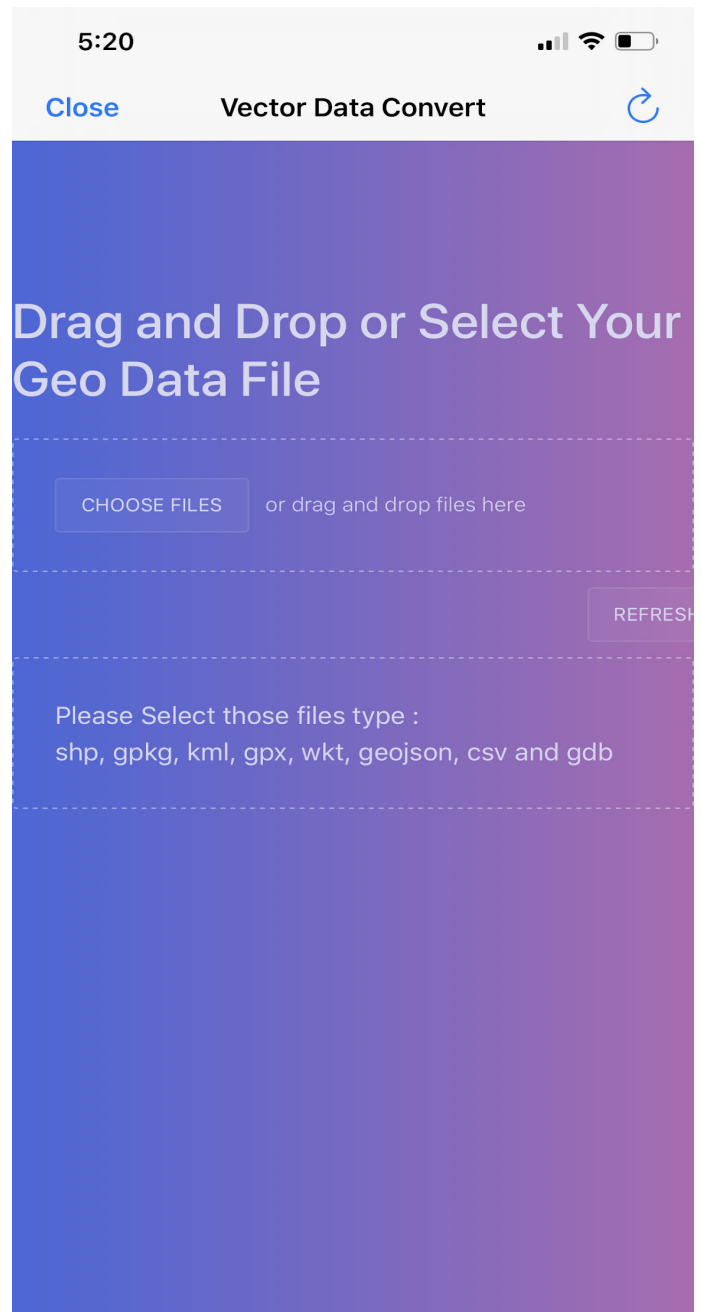

This screen allows you to convert GIS Mapping data to GeoJSON to load onto the map - there is NOT drag and drop - Just Select the button that says Choose Files and browse to the file to convert

Convert GIS Vector data from

- ESRI Shapefile (4326)
- OGC GPKG Vector Features (4326)
- GPX
- KML
- CSV (with lat long in decimal degrees 4326 WGS84)
- GeoJSON

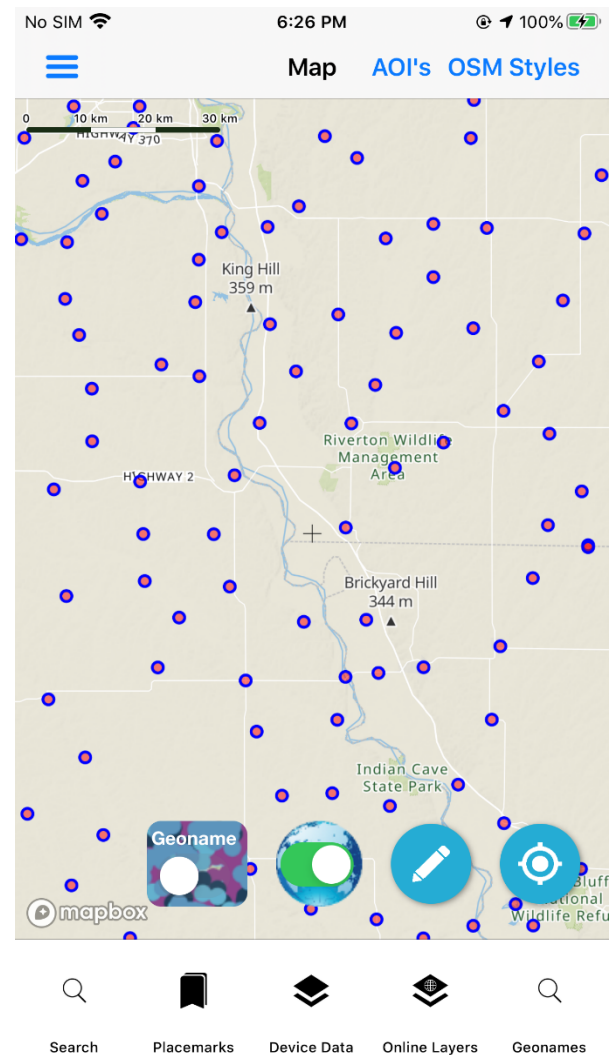

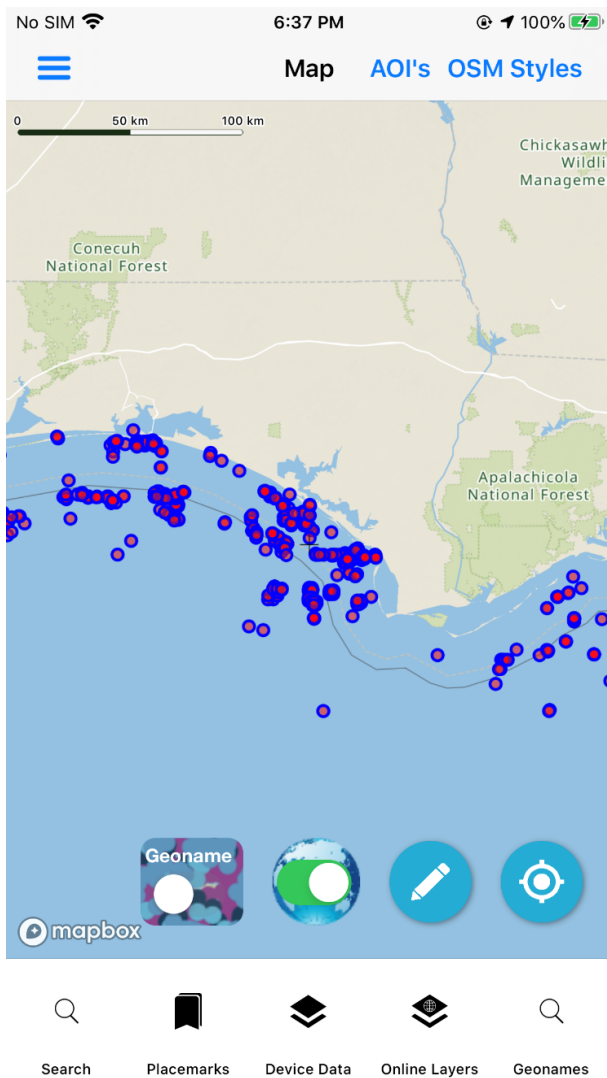

For Reference: ESRI ArcGIS calls it:

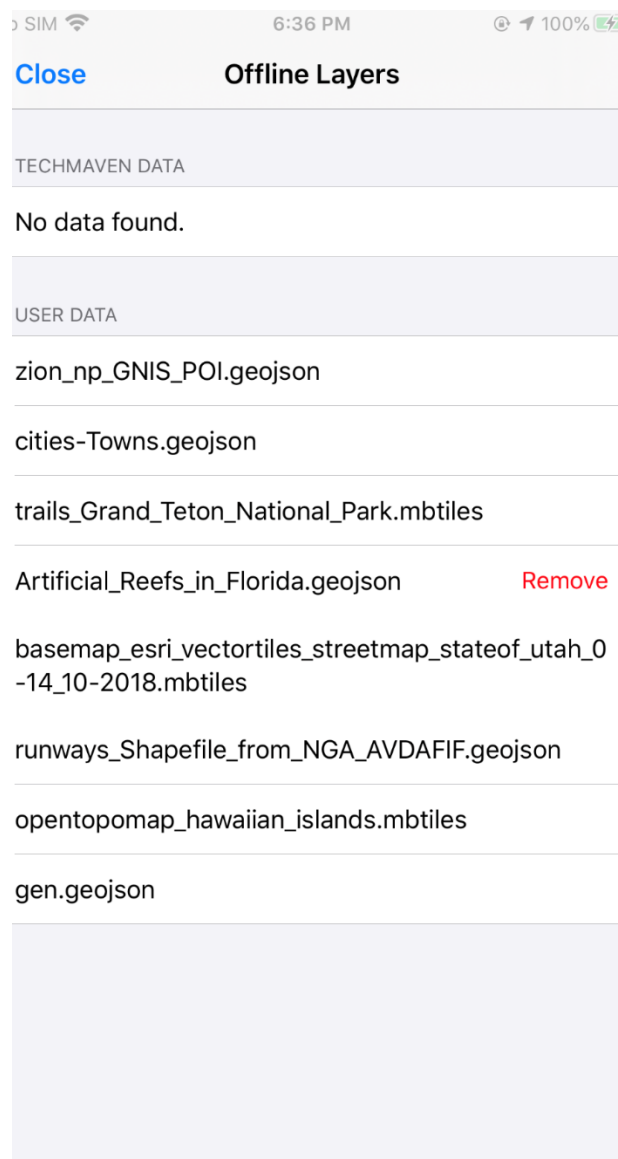

```
GEOGCS["GCS_WGS_1984",DATUM["D_WGS_1984",SPHEROID["WGS_1984",6378137,298.257223563]],PRIMEM["Greenwich",0],UNIT["Degree",0.017453292519943295]]
```

Note: The data should be fairly small, less than 2mb, ESRI FileGeodatabase is NOT supported, Shapefiles need to be zipped, Source data must be in 4326, Unprojected Geographic World Geodetic System 1984

KML

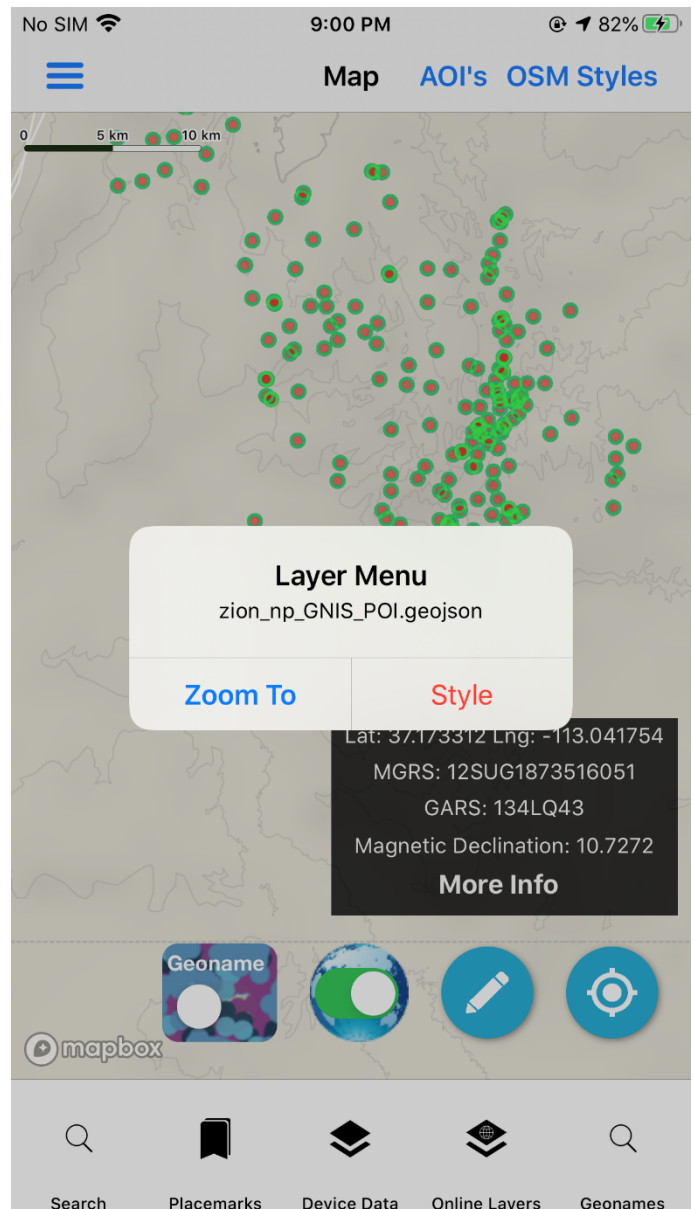

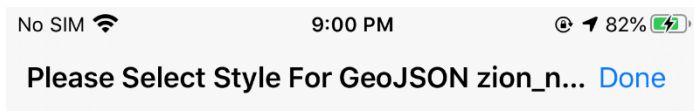

Shape File

Layer Style

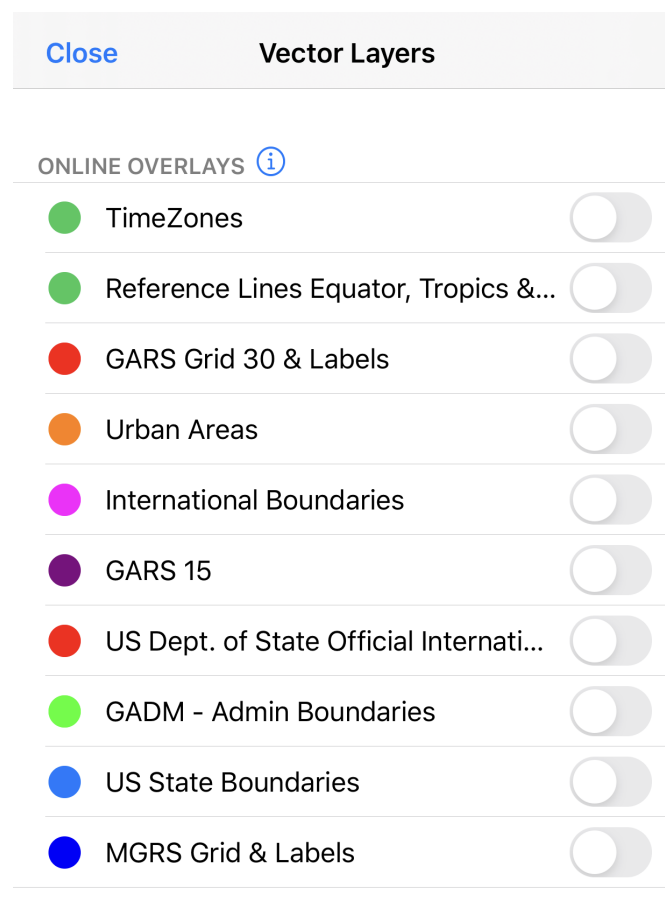

You can change style layers to their own colors.

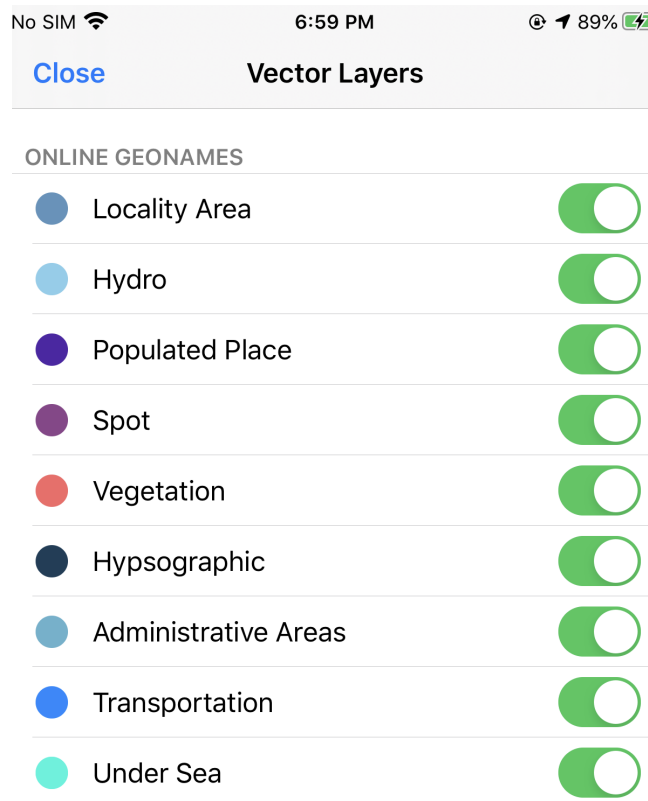

Vector Layer

Controlling the Display of the GeoNames data on the map.

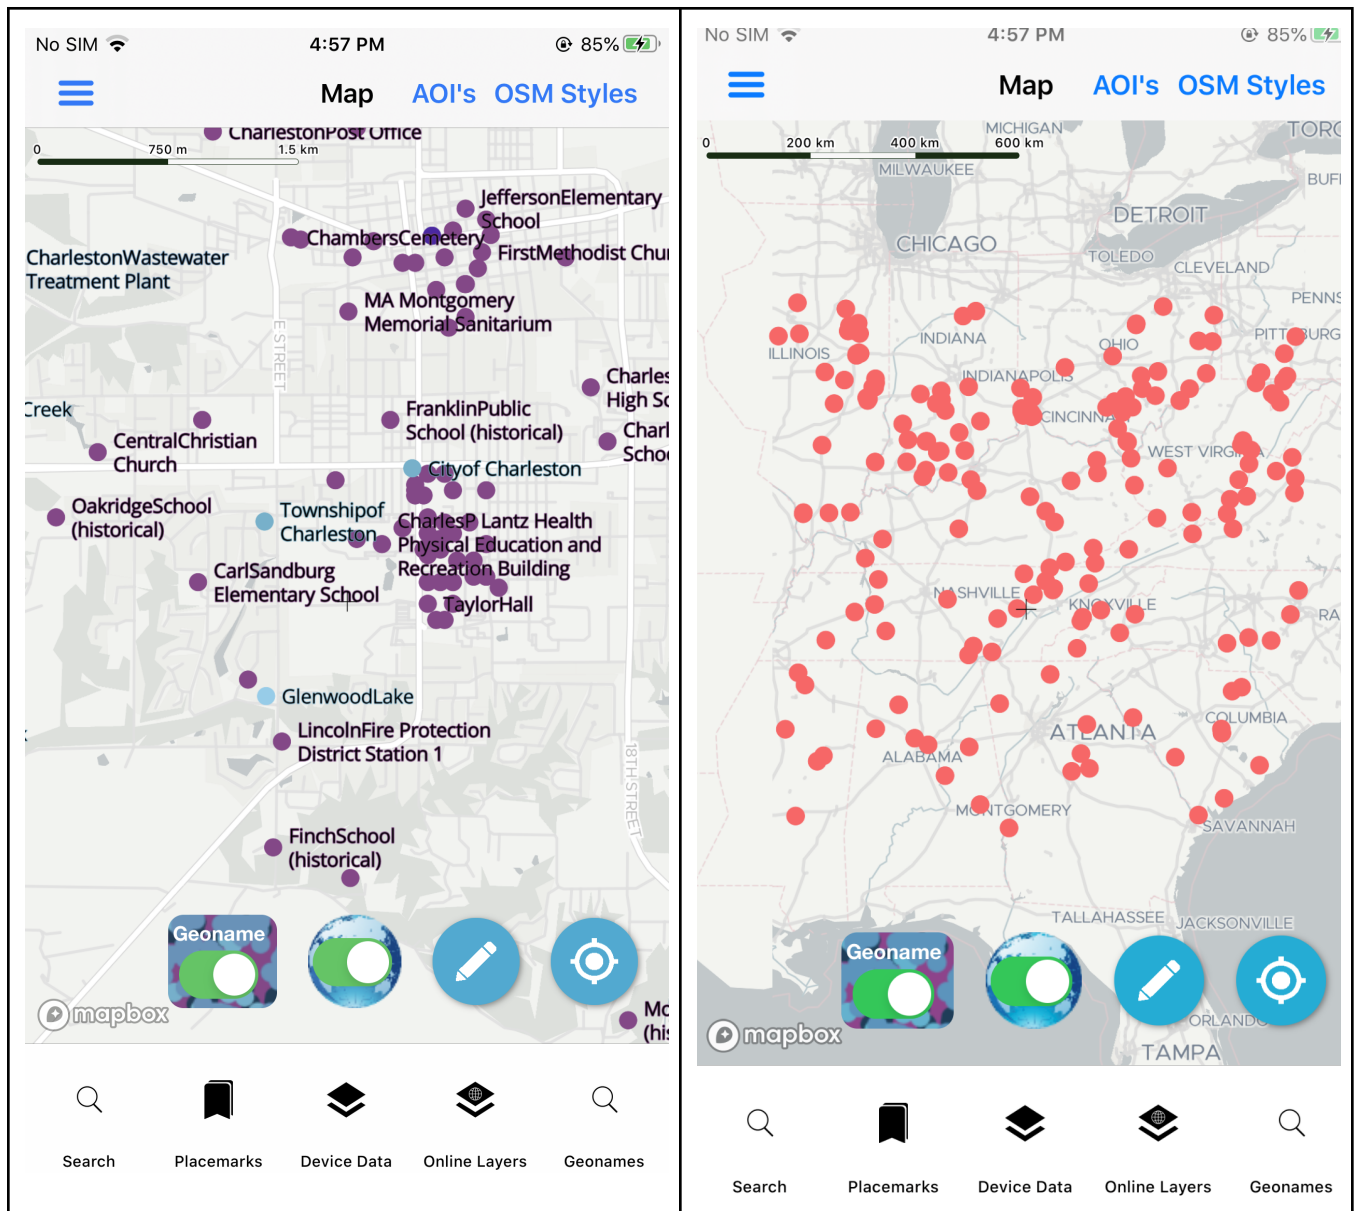

- You can decide what Feature Classes to Show. By default it's set to show all
- Includes Toggles for the GeoNames Data
- As well as Vector Tile Overlays
- These online overlays are vector tiles produced by and served by Tech Maven Geospatial
- By default they are all off
- Users can toggle on/off the geonames Feature Class Categories they want to see on the map.

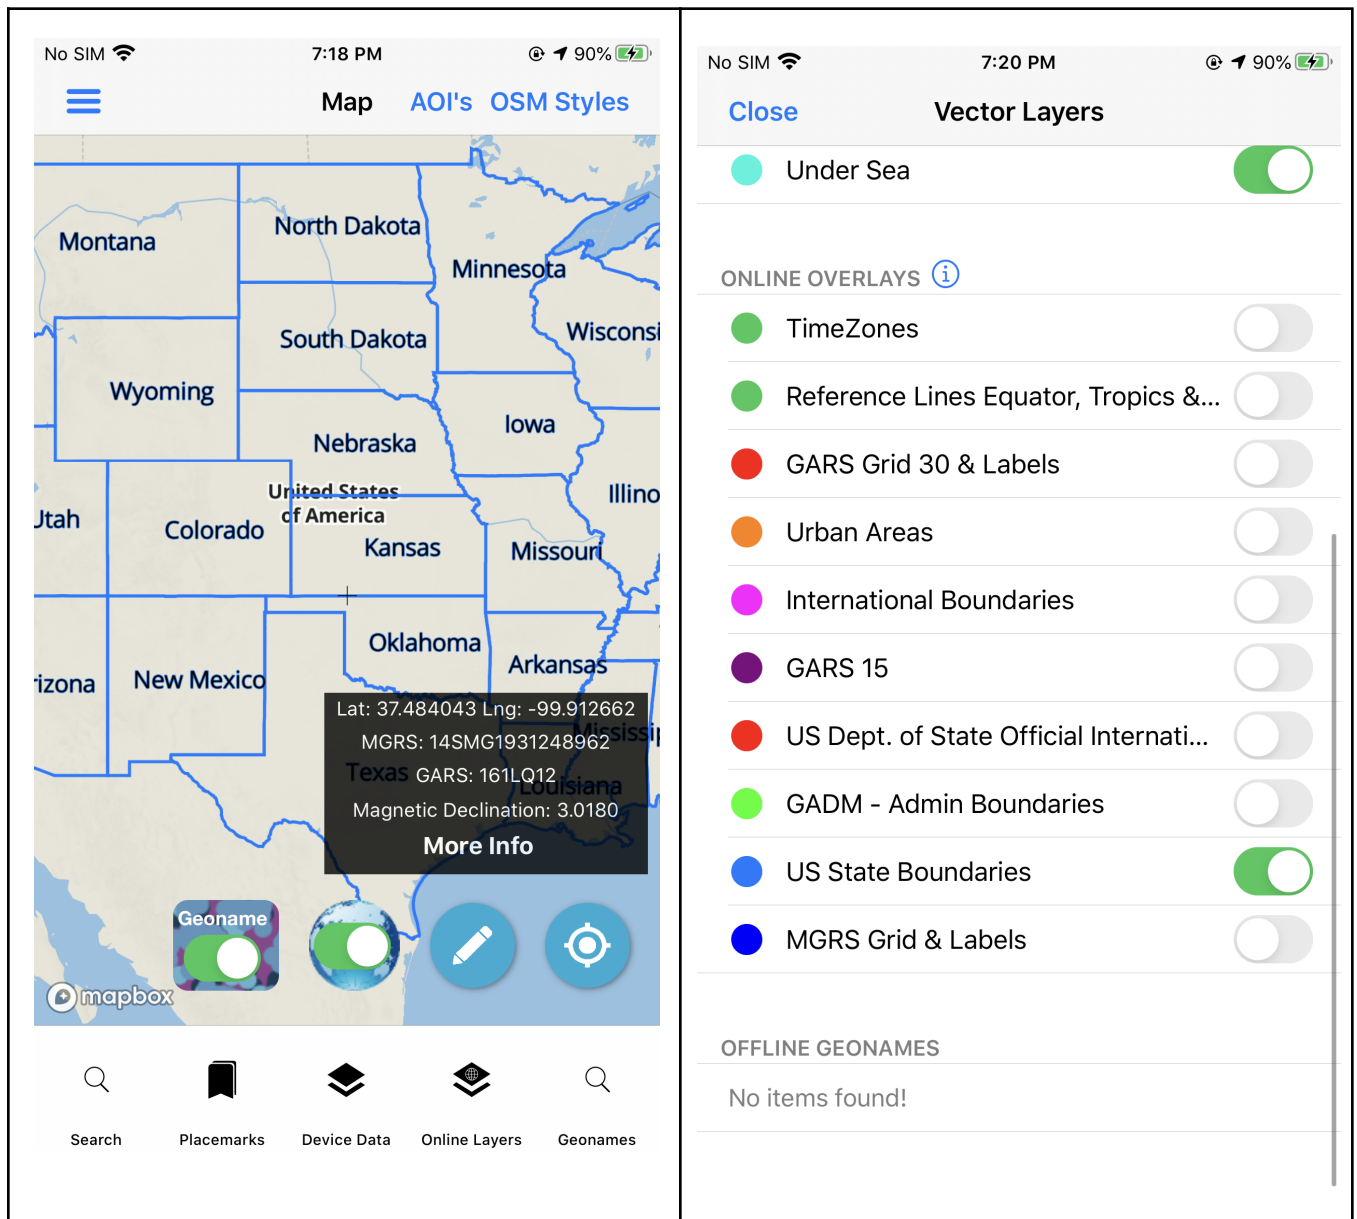

- GeoNames Data is shown on the map via optimized vector tiles
- We are utilizing the Display Field in controlling the scale dependency/zoom levels to show the data
- As you zoom in additional data will be shown (for USA USGS GNIS there is no display field so it shows all data at all zoom levels)
- Data starts displaying at level 5 (0-4 there are no GeoNames Displayed)
- Vector Tiles allow overzooming of the data so there is NOT stopping the GeoNames after 15 they continue showing to 25
- When Scale Bar Shows (you do not want to be viewing geonames data when zoomed out behind this)
- 4 miles = about zoom level 10 (1:500,000 map scale)
- 2 miles = about zoom level 12 (1:150,000 map scale)

- 1 mile = about zoom level 13 (1:70,000 thousand map scale)
- 0.5 miles = about zoom level 13.5
- 0.25 miles = about zoom level 14 (1:35,000 thousand map scale)

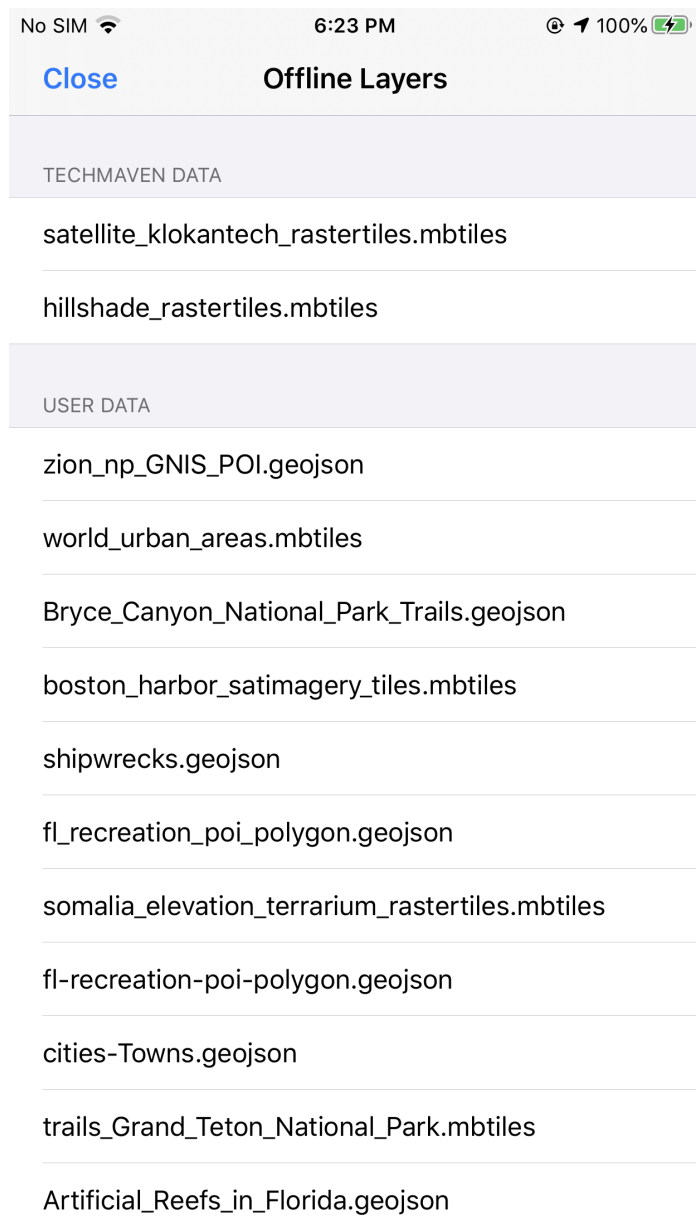

User Offline Data (Device Data):

Users can add:

- GeoJSON (expected to be 4326 and single geometry type in one file)
- raster tiles MBTiles files (*user vector tiles mbtiles are NOT supported at this point*)
- Data must be loaded into the GeoNames Map Explorer Documents Folder either transfer via itunes file transfer or using the Files app.
- We can't access files outside of the app folder and it can't be in subfolders/directories.

From the Map Screen Click Device Data bottom navigation. User Data and click to enable, If you enable multiple go to Navigation Menu and Layer Display Order to change the Order of the Data. You want a GeoJSON file on top of a Raster Tile layer and also support other types of files:

- GeoPackage (.gpkg)
- Shapefile(.shp)
- KML
- CSV

Offline Maps

You can do online geonames search with toggle Spatial Search with specific areas in Kilometers Distance from your center point.

Geolocation GNSS

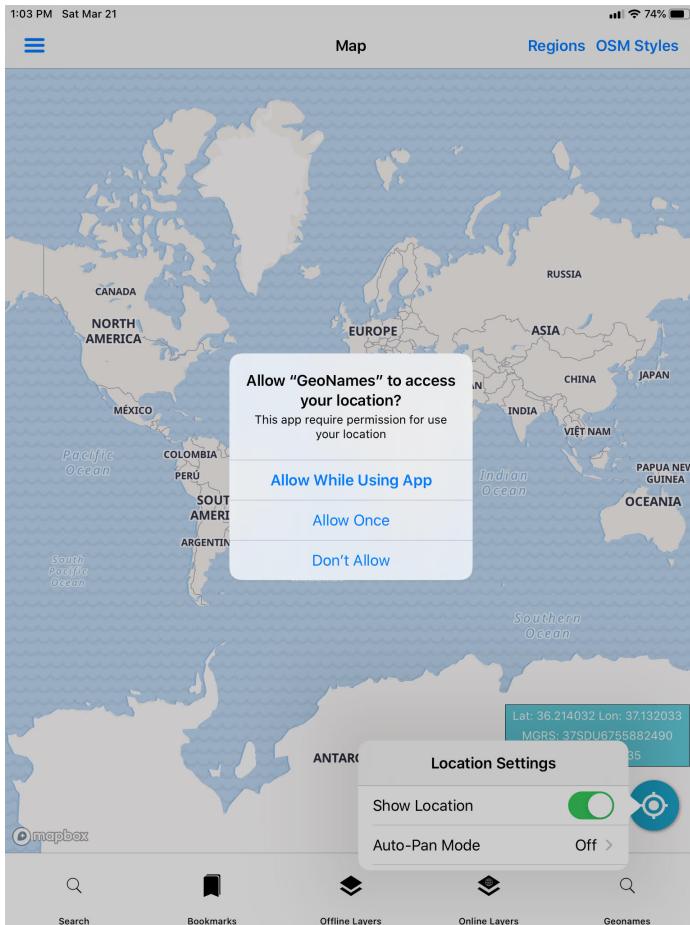

By Default GeoLocation is enabled you will see your location on the map.

- You can Toggle Off - Show Location on the Map
- You can Configure your desired Auto-Pan Mode (Off default, Follow, Follow with Heading, Follow with Course)
- If you have selected a Follow option
- Map will continuously moved with your geolocation

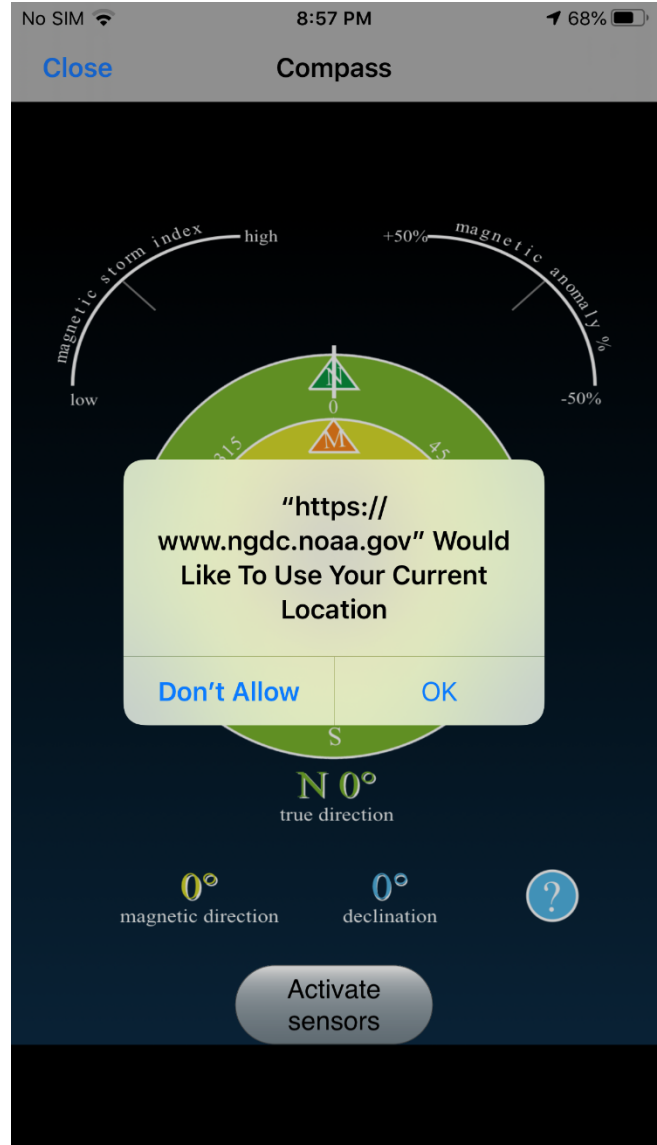

The Map works with your iPad's 4G GNSS/GPS Chip or IP Geolocation

- 1) Click the Geolocation button on the map. Click Show Location
- 2) Allow the Permissions

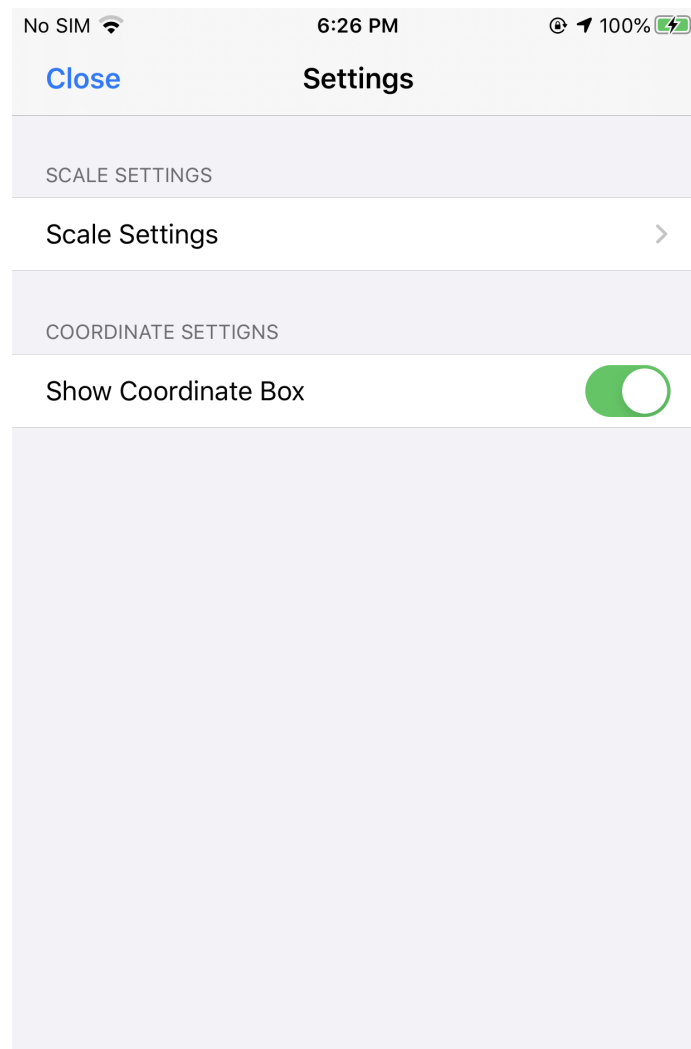

Compass

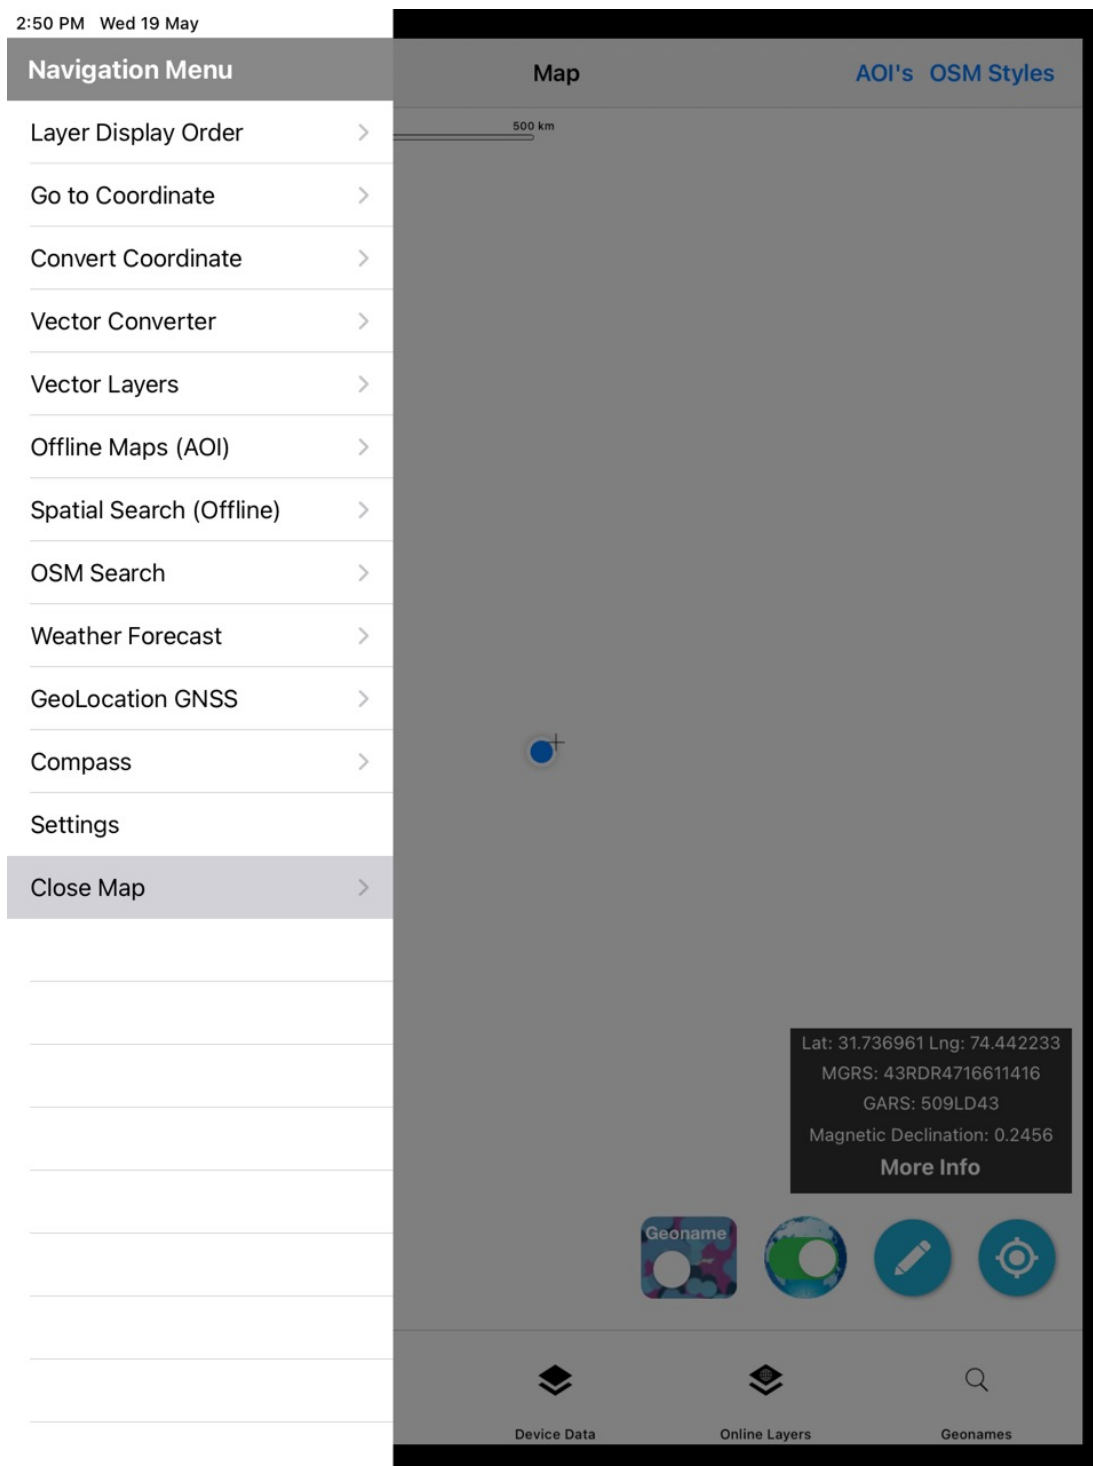

Settings

The units of measure in 1.0.0 are NOT adjustable it's set to Statute Miles
In future versions of the app we will enable in these settings to adjust to other units of measure

Close Map

Clicking on the Close Map button will close the map and return back to the main menu of the application.

Local Data

Users can load their own data via iTunes File Sharing and iCloud and other iOS methods. GeoJSON and GPKG Vector features (GIS Data) and Raster Tiles in MBTILES and GeoPackage (GPKG) and Mbtiles vector tiles are supported.

Add Local GeoJson

GeoJSON geospatial data interchange format based on JavaScript Object Notation (JSON) can support multiple geometries types in one file it's best to keep them simple and small sized and keep the GeoJSON 4326 geographic wgs84. QGIS Desktop can create or convert data into GeoJSON. Users can also create geojson online <http://geojson.io/#map=2/20.0/0.0> and export for loading into the app. Users can also use tools like OGR2OGR to convert existing GIS data and databases into GeoJSON

Chickasaw_National_Recreation_Area_Trails.geojson [Remove](#)

Add Raster Tiles MBTILES

Raster Tiles with image formats PNG, JPG, WebP are supported other image formats are NOT supported, Supports Hybrid tiles with mix of JPG and PNG. Tiles can be a view or a table. Metadata table must include the following required records: name, description, format, minzoom, maxzoom and bounds. Center is optional, Mbtiles are always in Spherical Web Mercator Coordinate Reference System as per the spec some tools/implementations allow for building mbtiles in others but we do not support that. The raster tiles can be in multiples of 256x256 pixels 512x512 or 1024x1024 are also supported. The APP currently does NOT allow OVERZOOMING of Raster Tiles if the data goes to Zoom Level 17 you will not be able to zoom to 18, 19, 20,etc

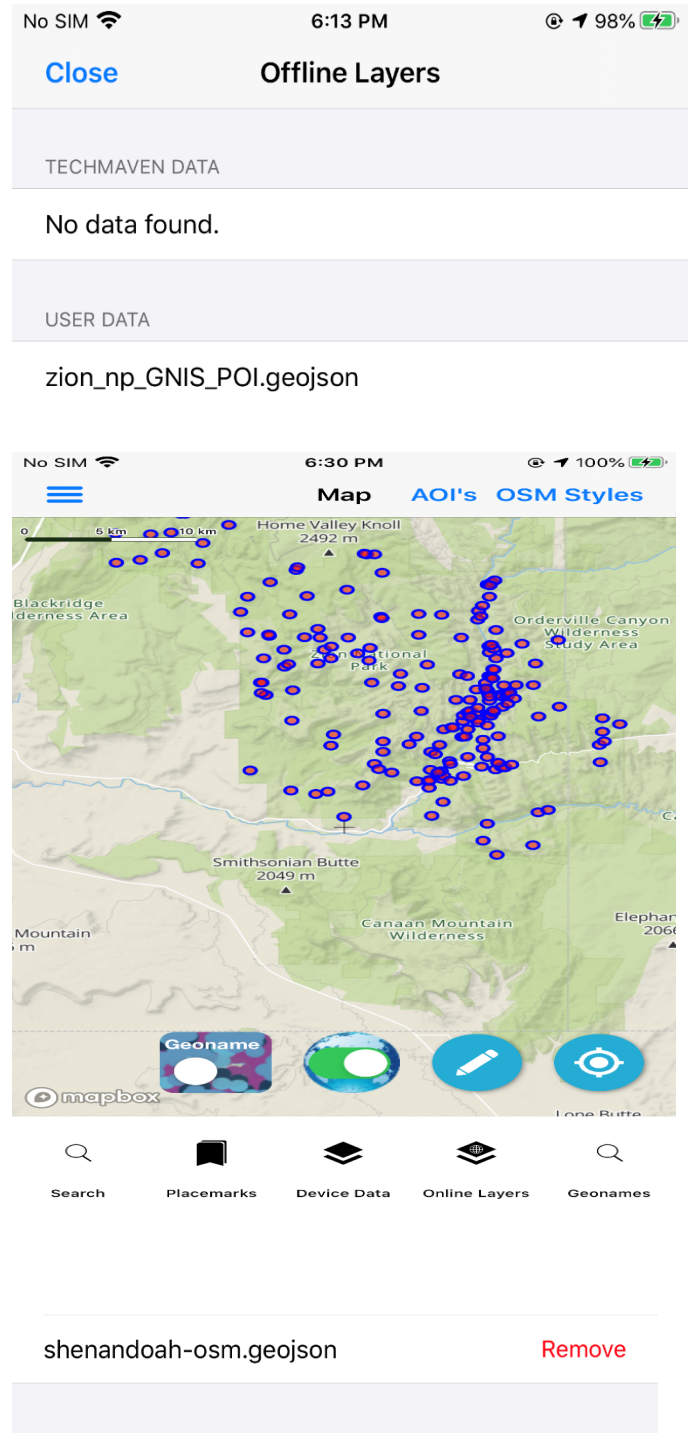

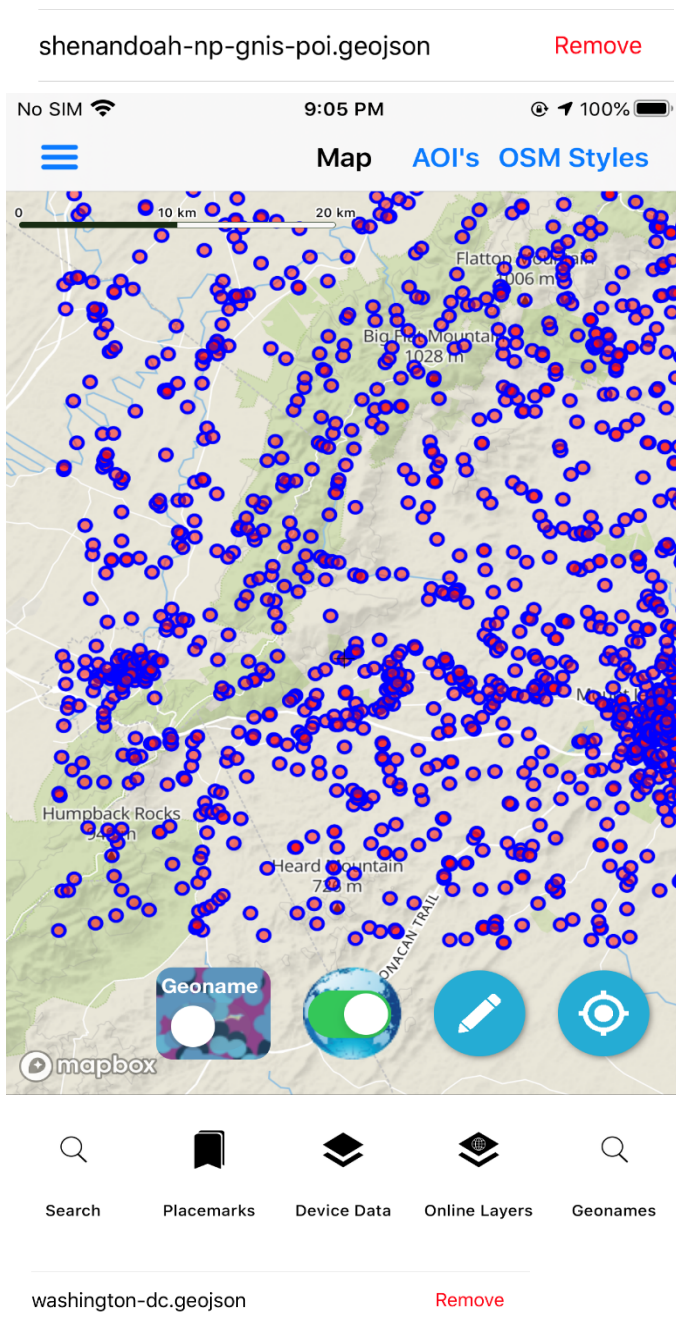

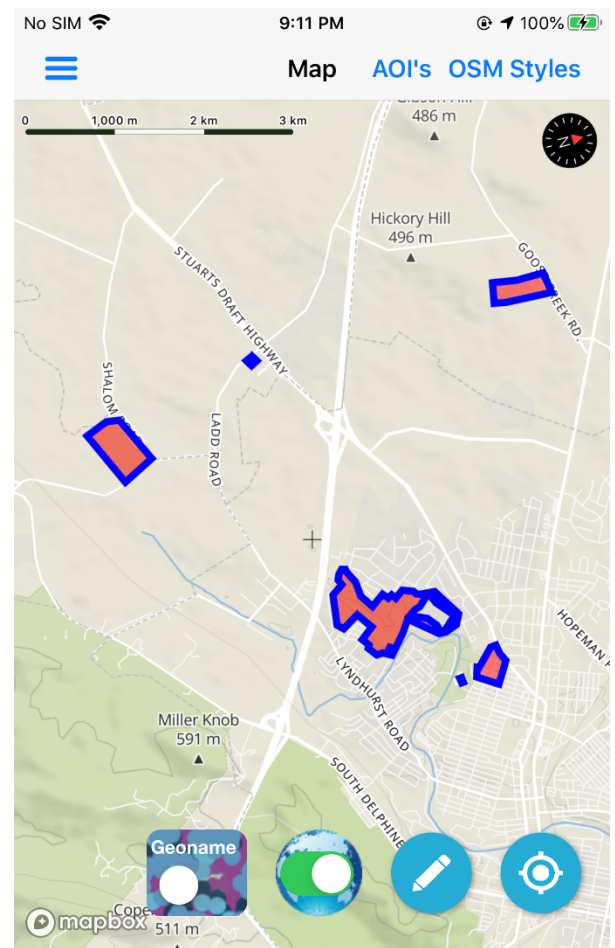

Add Raster Tiles GPKG (GeoPackage)

GeoPackage raster tiles must be EPSG: 3857 Spherical Web Mercator/Auxiliary Web Sphere (We are working to fully support NSG Spec GPKG 3395 and 4326 GeoPackages in future versions of the app)

If users have GeoTIFF, SID, JP2 Raster Imagery they can build Raster Tiles with GDAL or QGIS Desktop

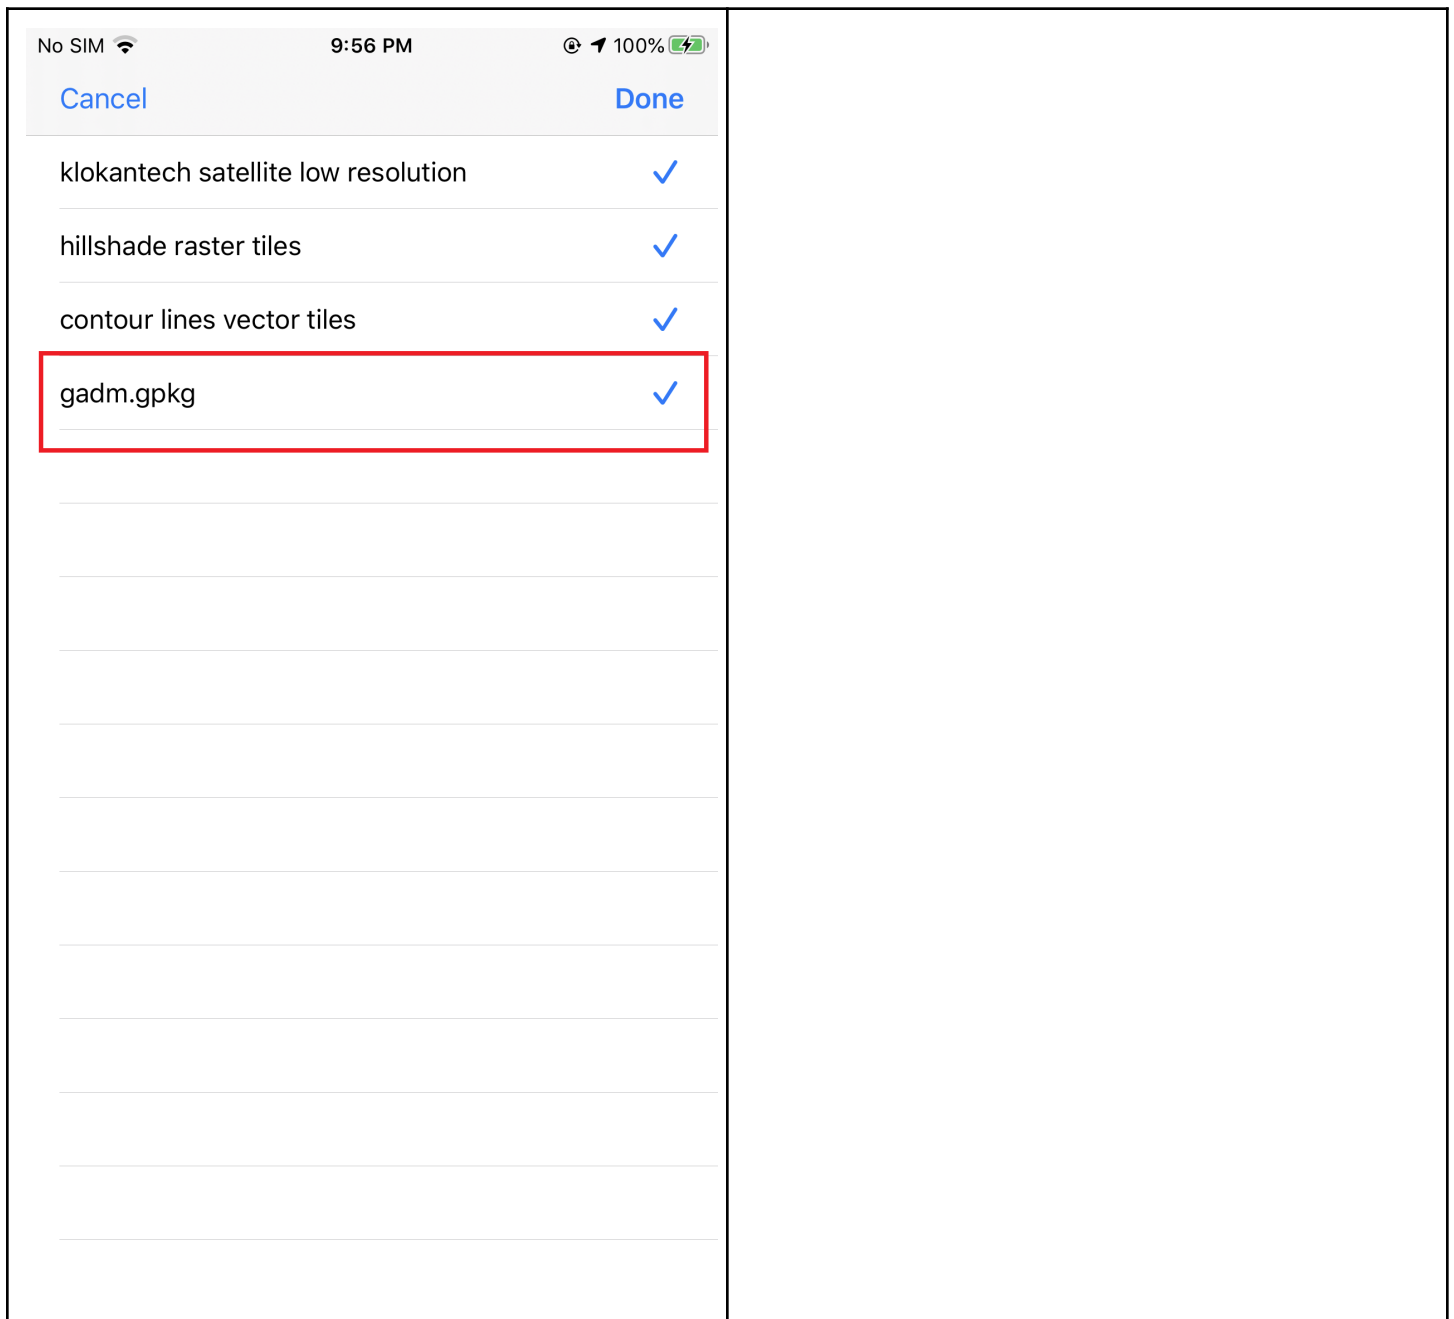

GADM Country Place Name Widget

Only available ,if you have downloaded that optional gadm.gpkg data during downloading AOI.

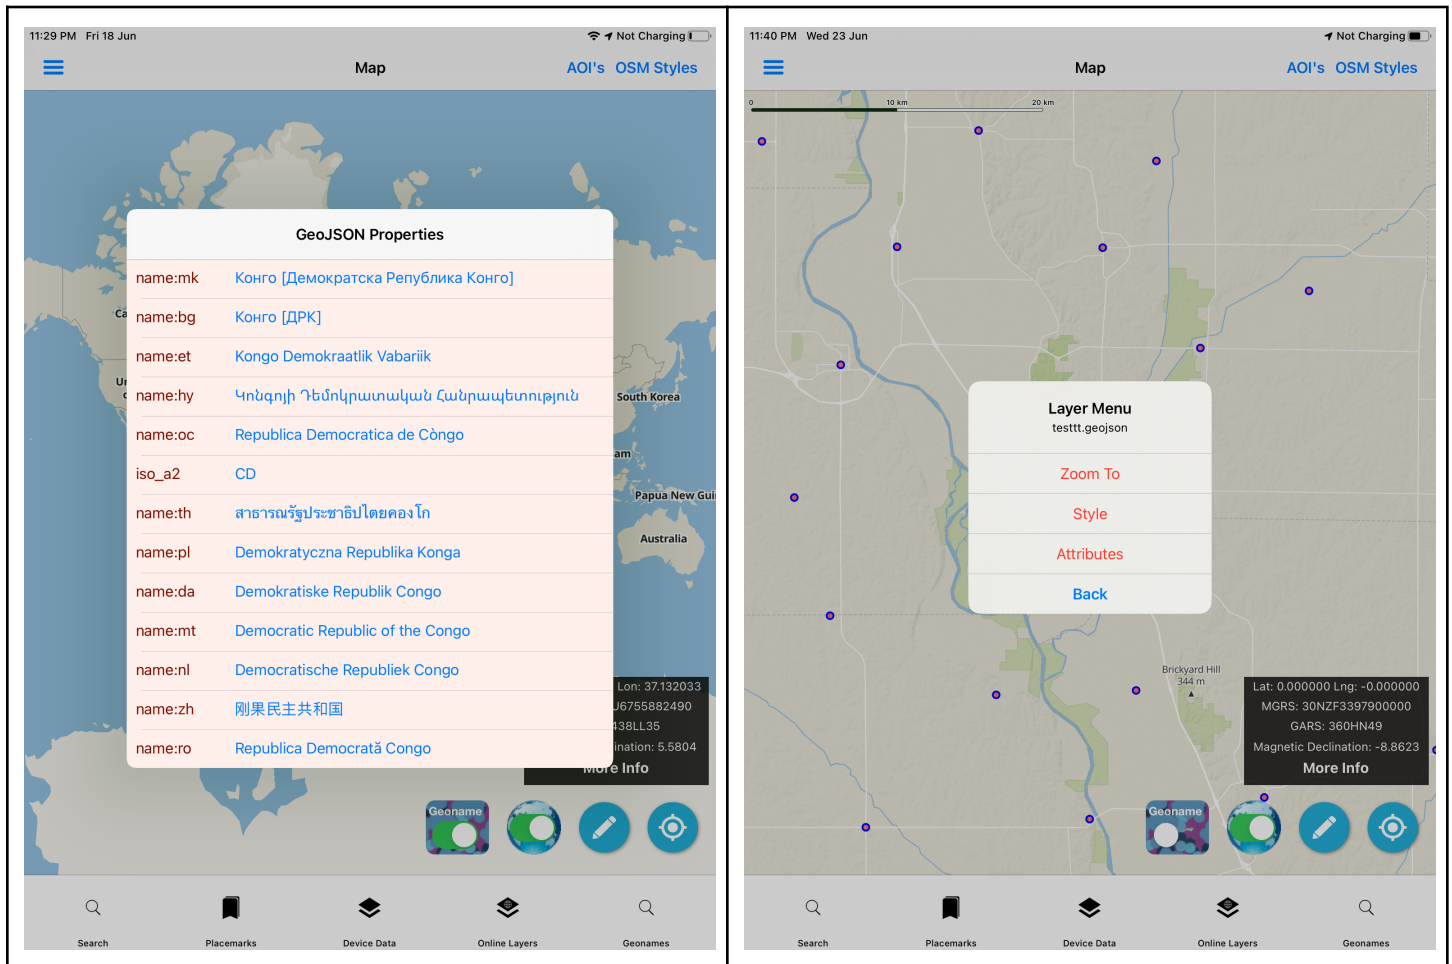

Perform Local Data tests/checks

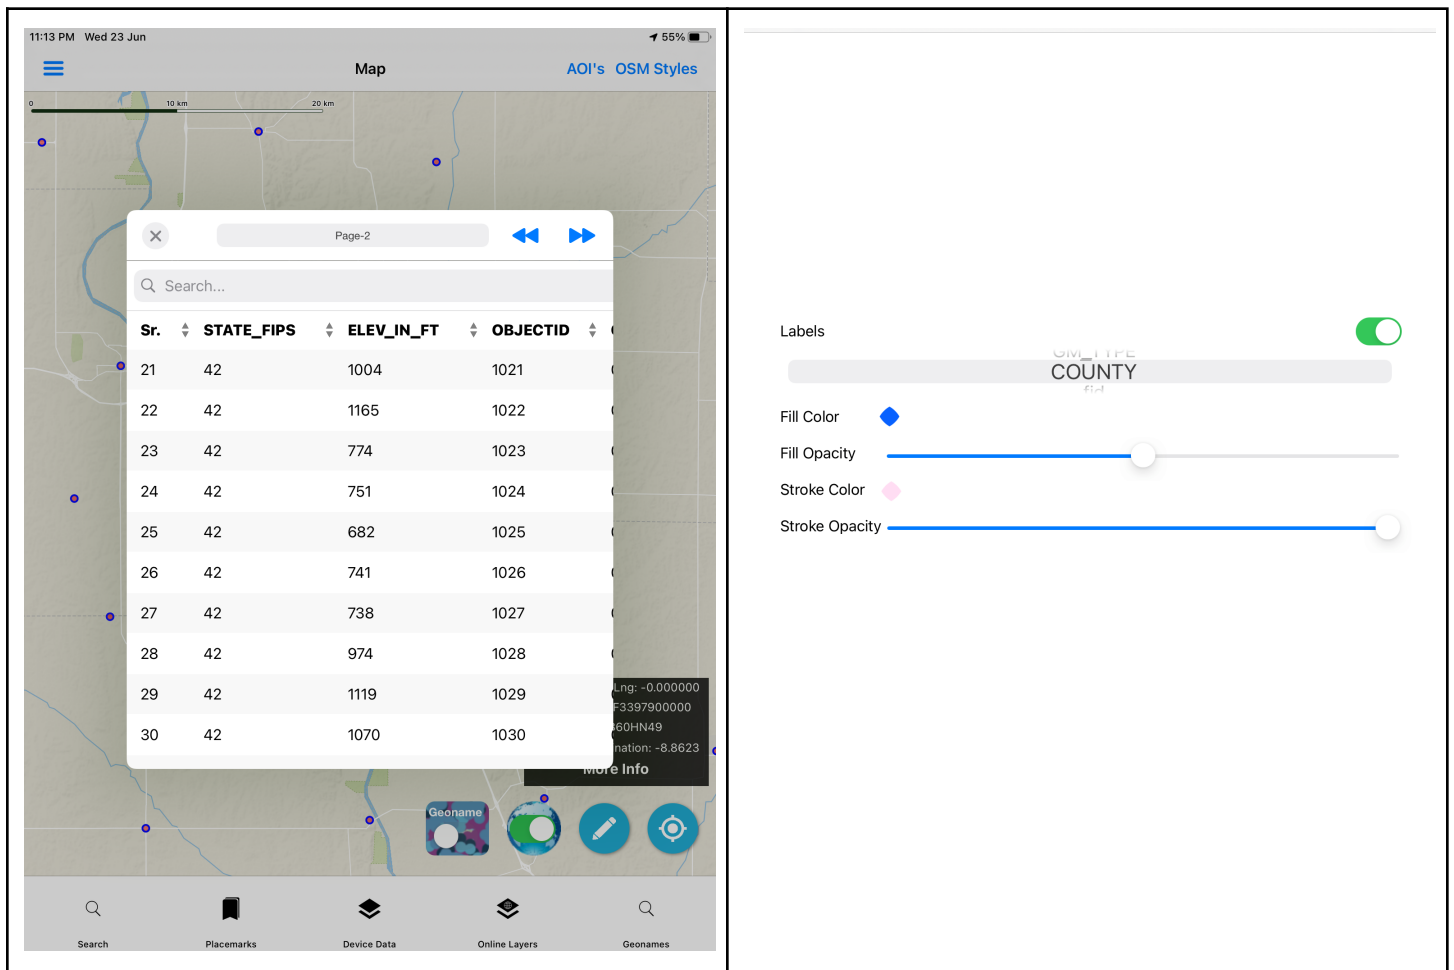

Test ONLINE Toggle

if toggle to Offline Mode Internet Base Maps and MapServices should be disconnected

Geojson Labels, Tables and Popups

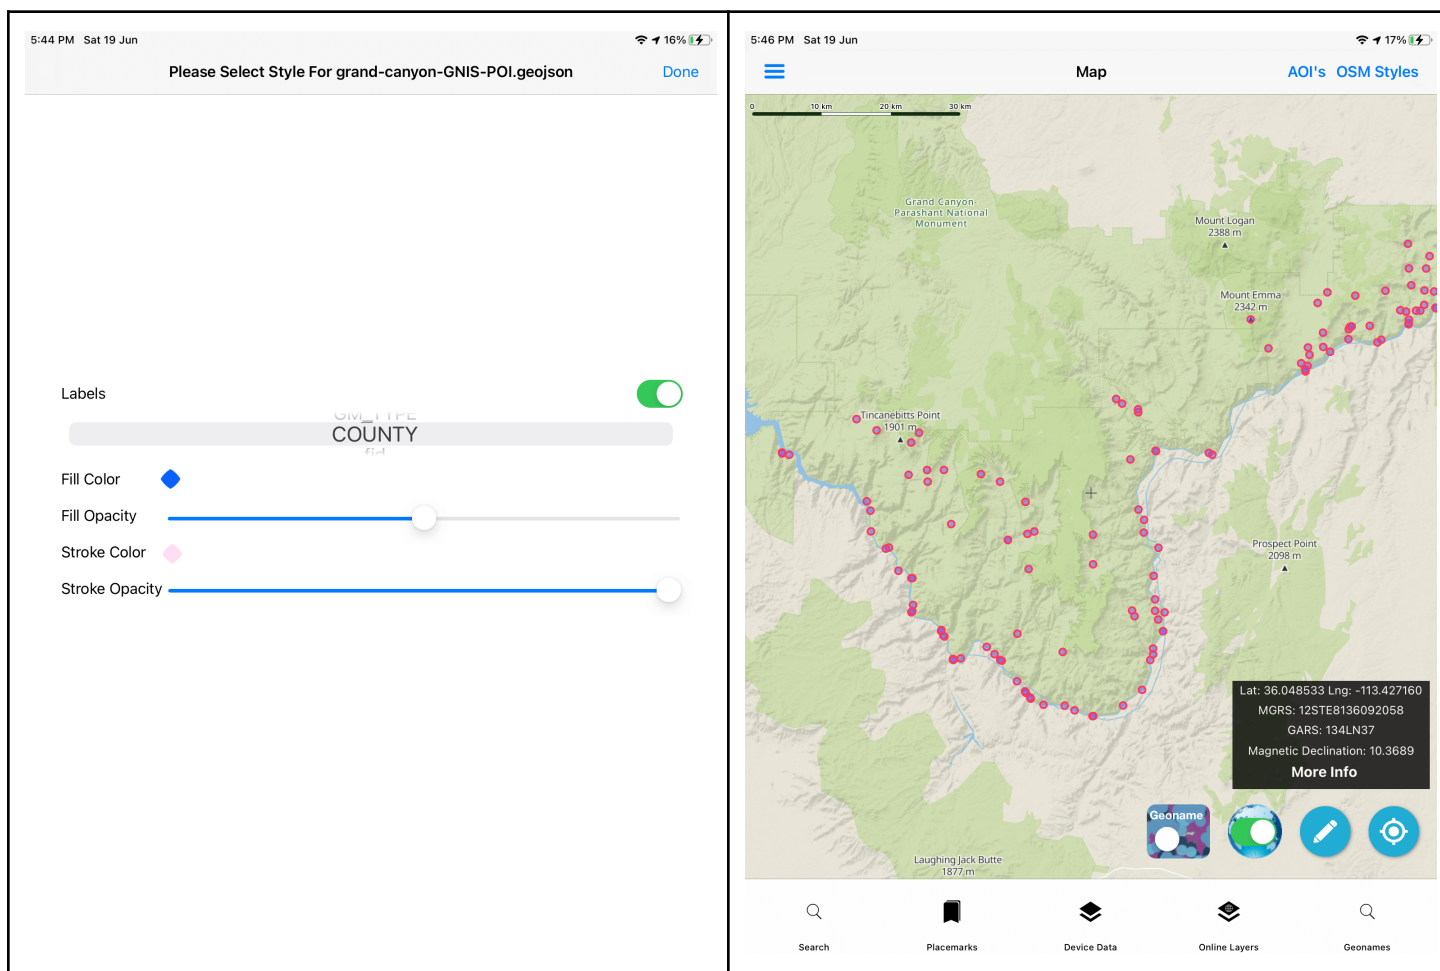

Users can click on a map and can see geojson properties in tabular form.

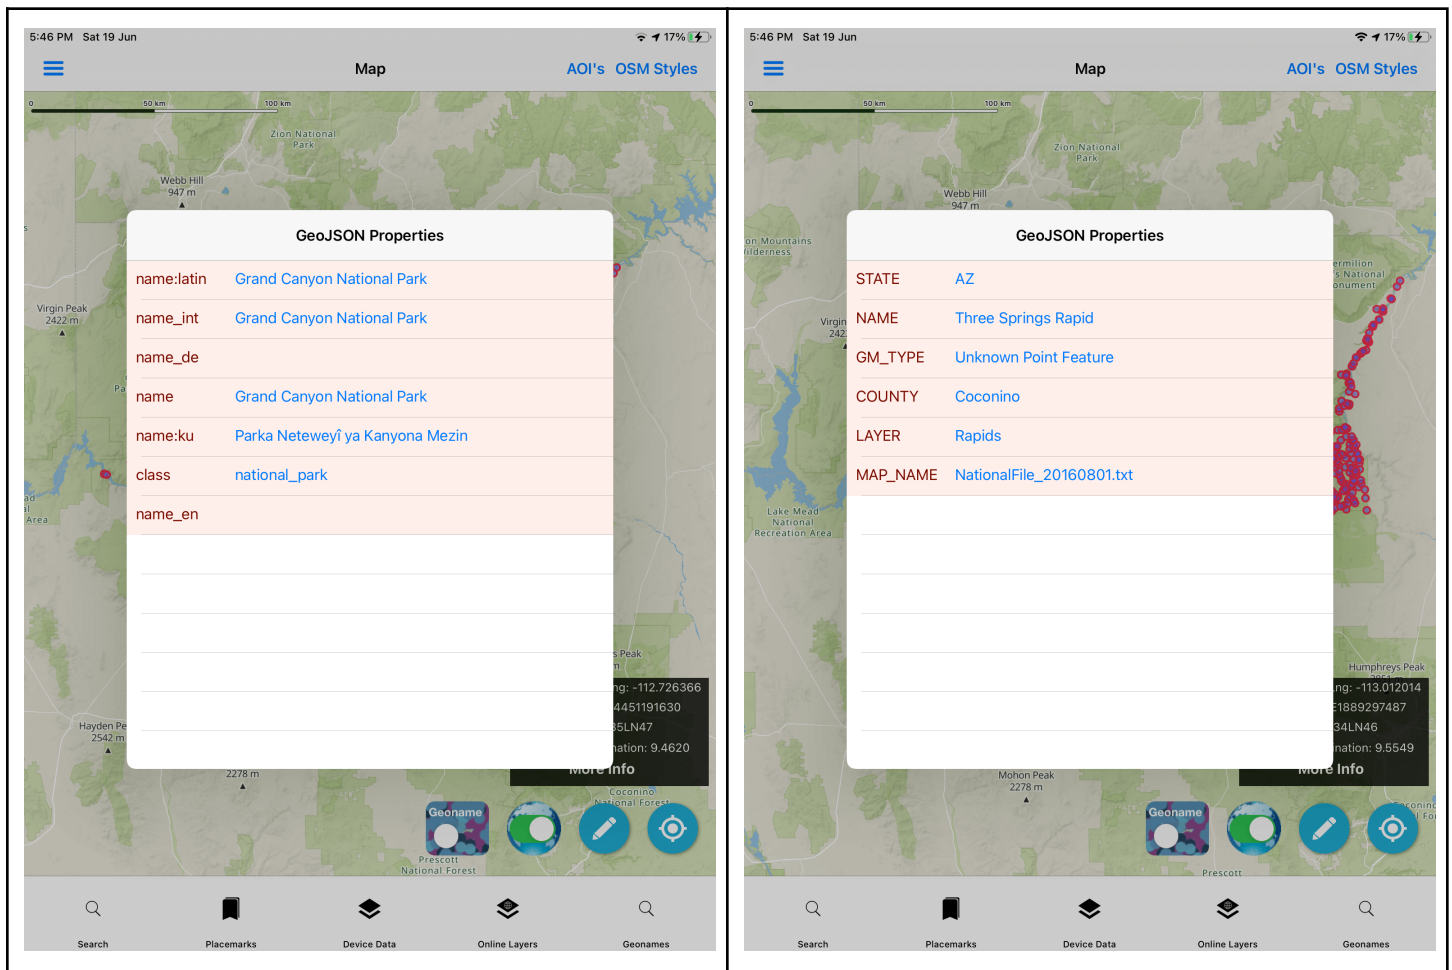

GPKG Vector Features Attribute/Grid table

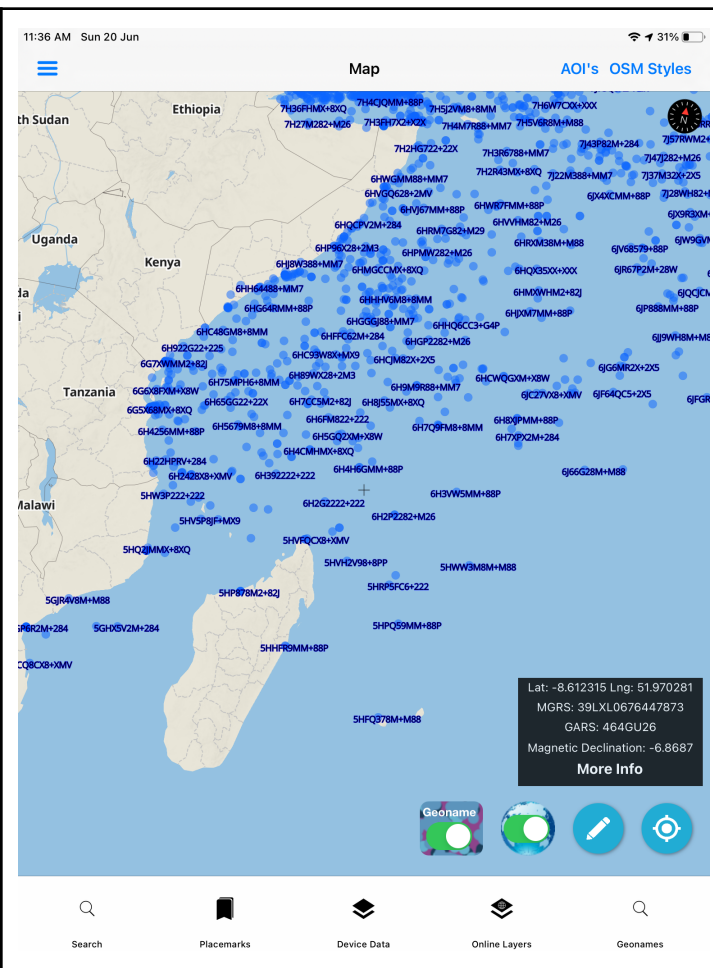

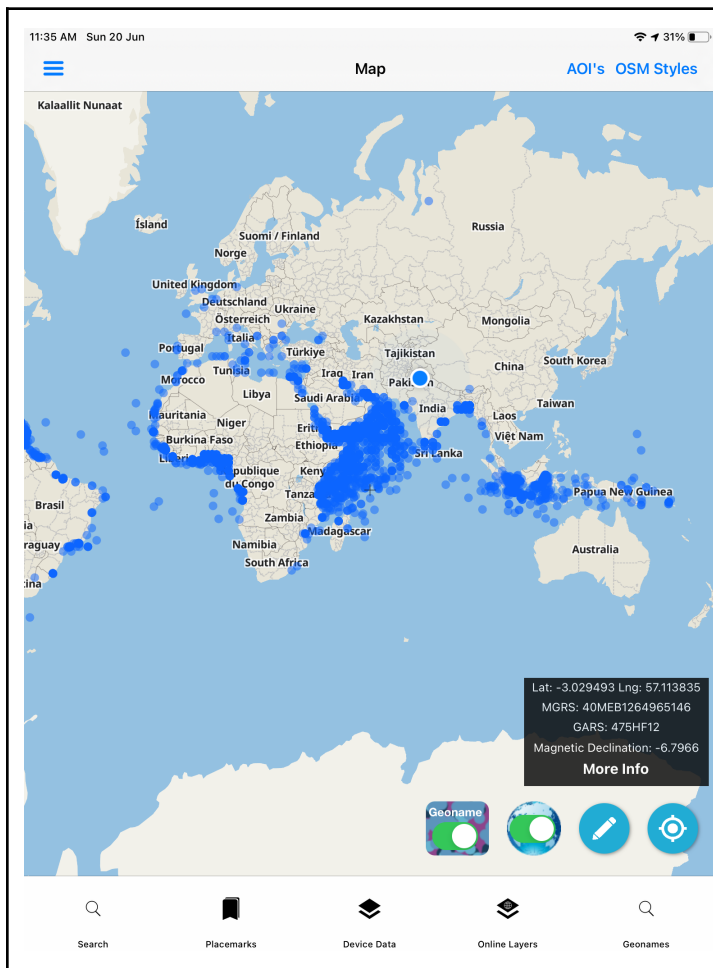

Users can load vector gpkg on map and change style and labels of respective vector layers and see on map .

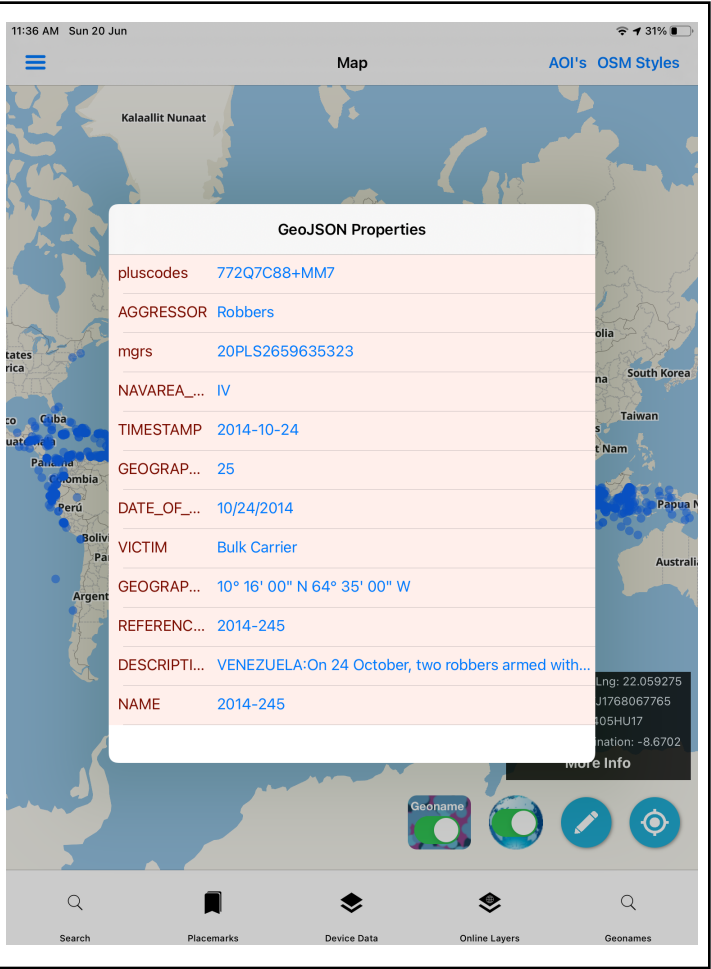

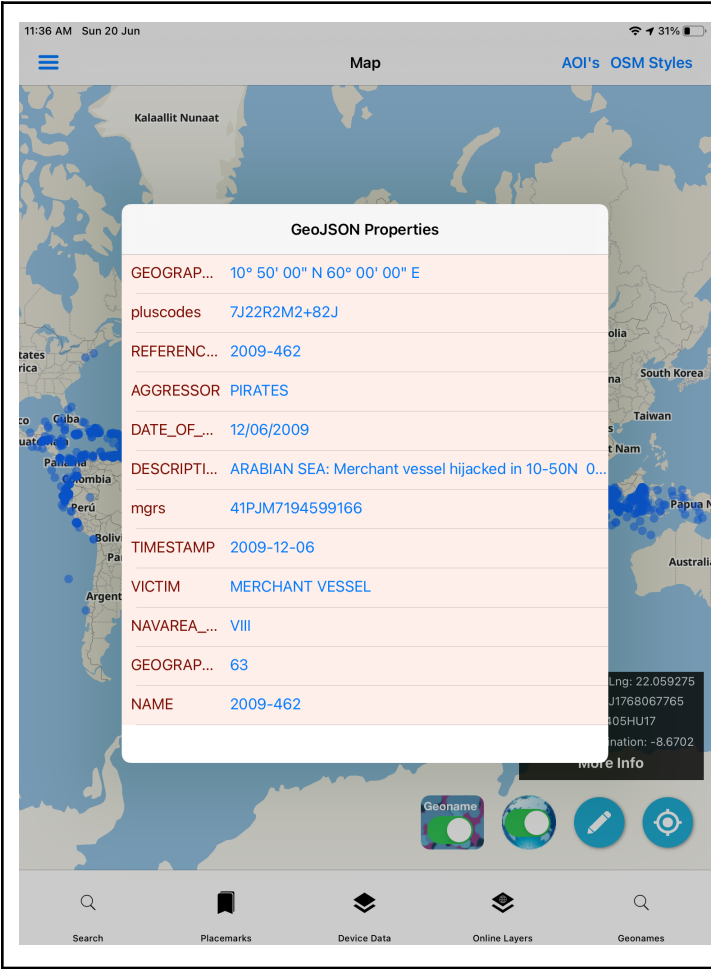

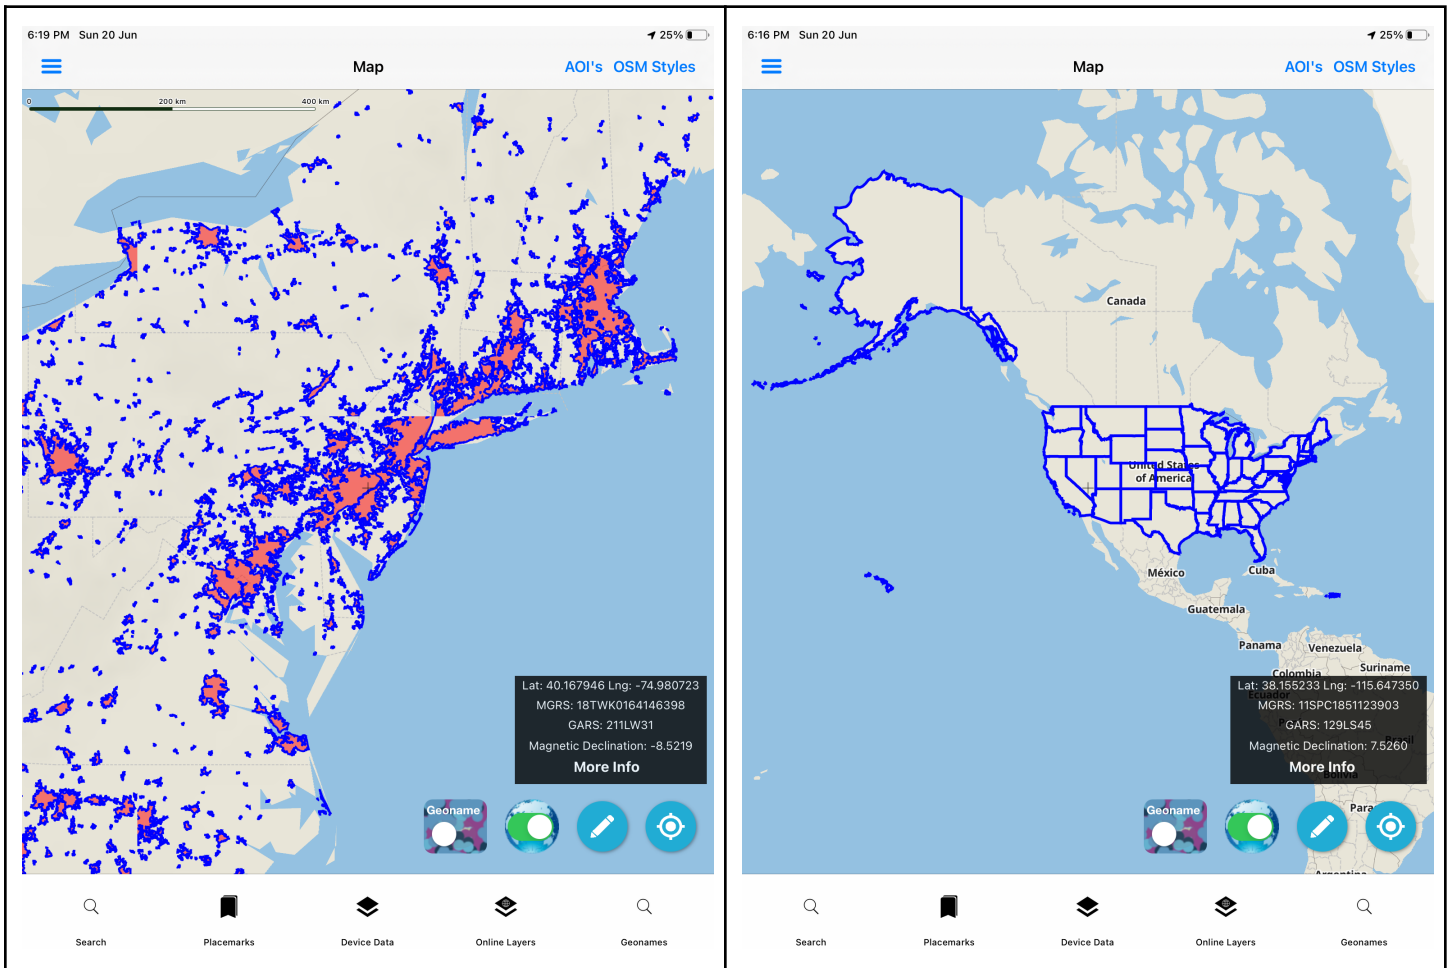

Mbtiles Vector Tiles

Users can upload mbtiles vector tiles using the device data option, and can style fill color, and change fill opacity and labels respectively. Currently we are not supporting multiple layers vector tiles, And data must be gzipped/gzf PBF inside tile_data blob.

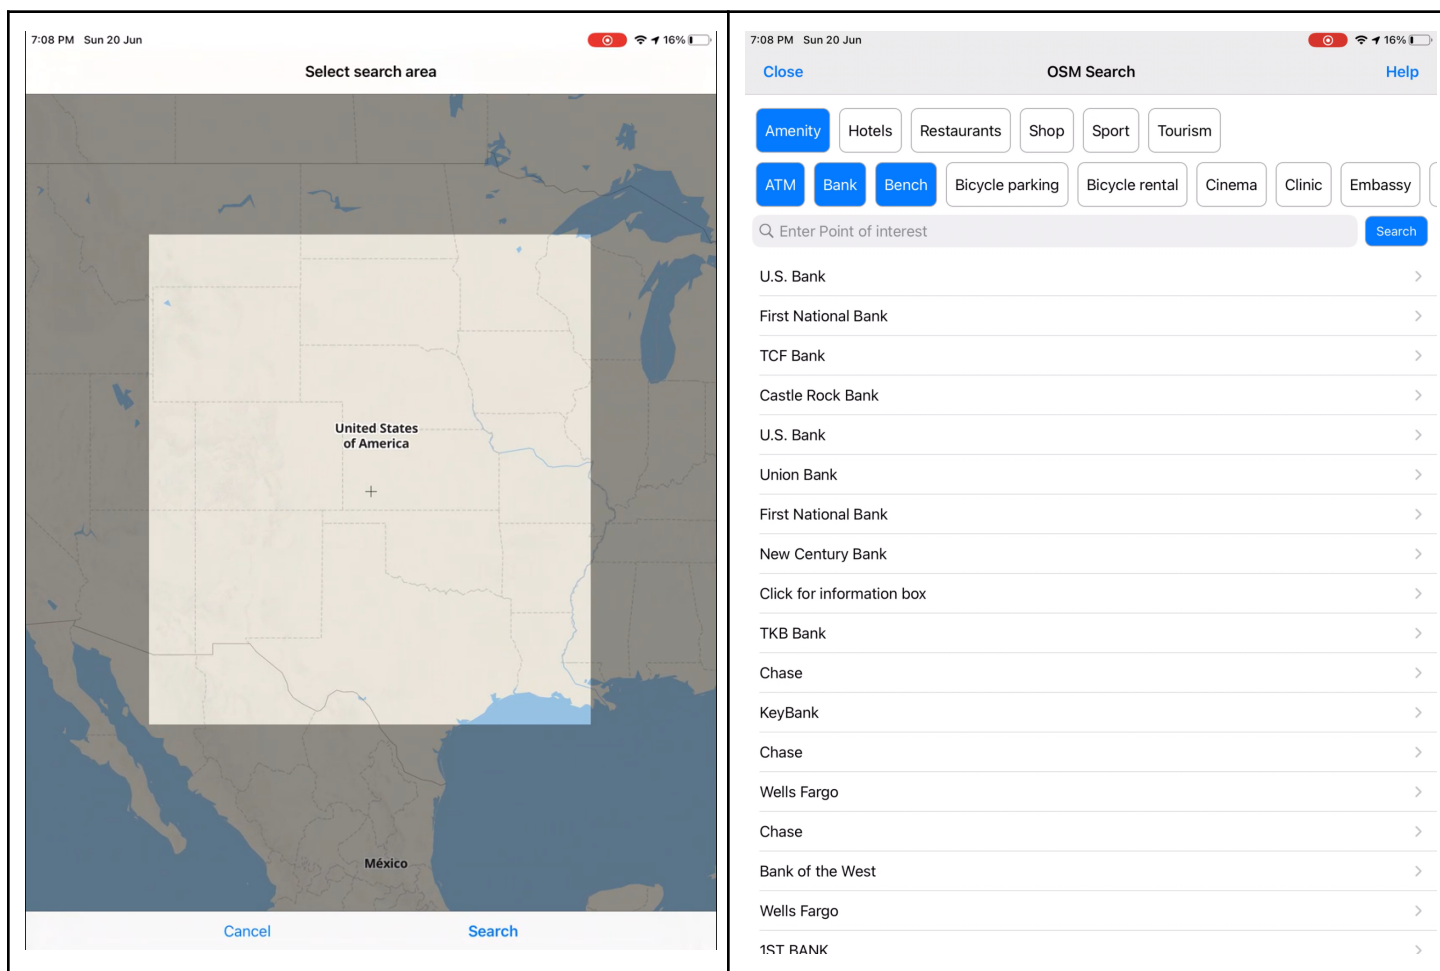

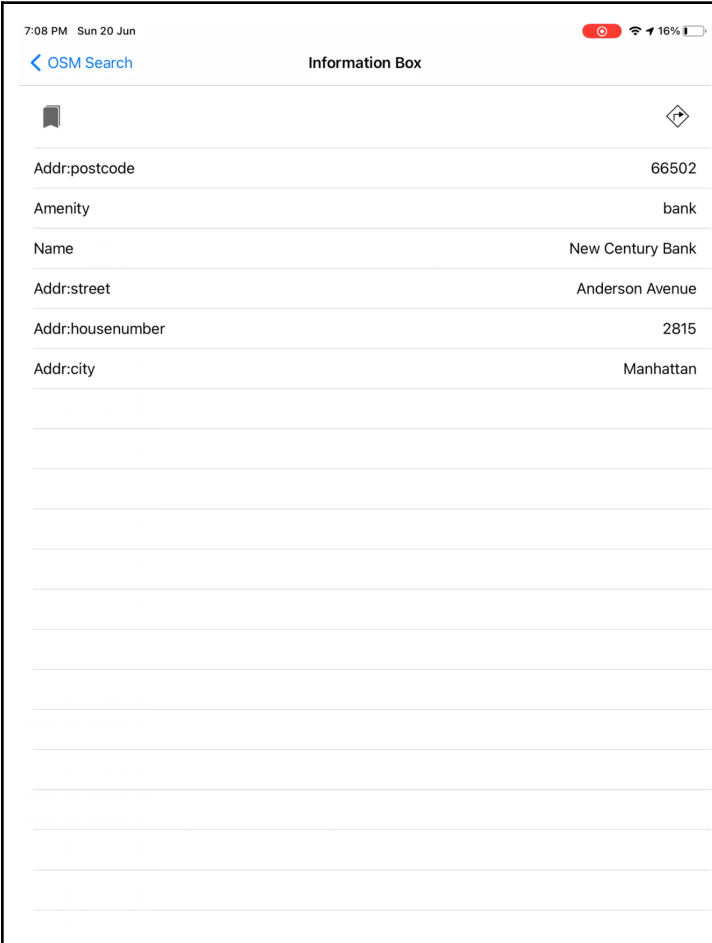

OSM-Open Street Map SEARCH - Points of Interest (using the Overpass-API) **Searching** * Requires Internet

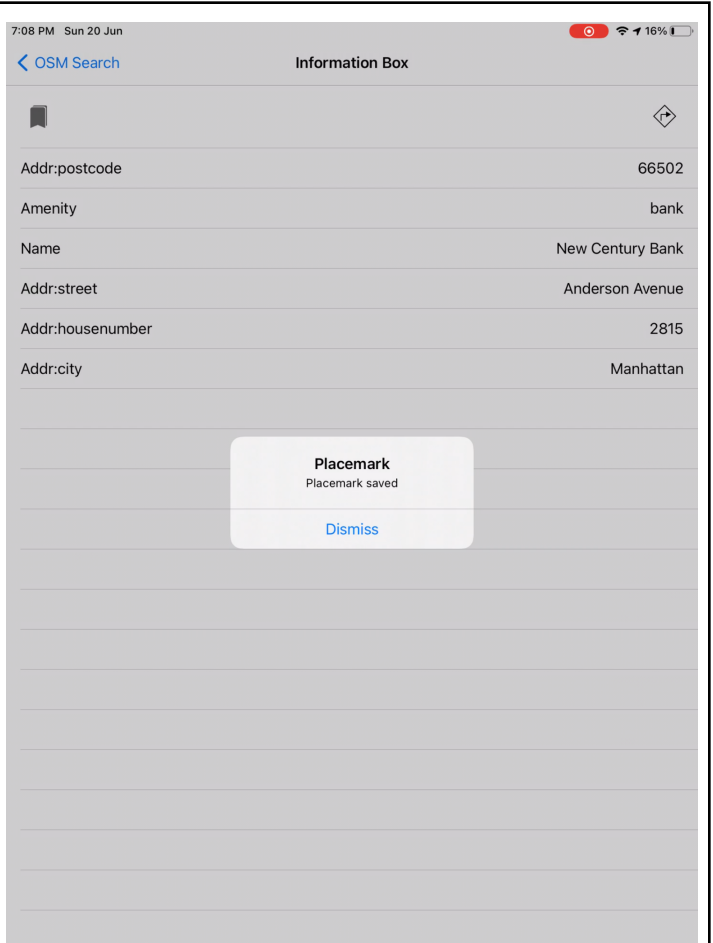

Users can search in an area of POI (Points of Interest) and amenities within a geographic area they specify.

First pick the top level category and then the sub category/type (example: Amenity Bank or ATM)

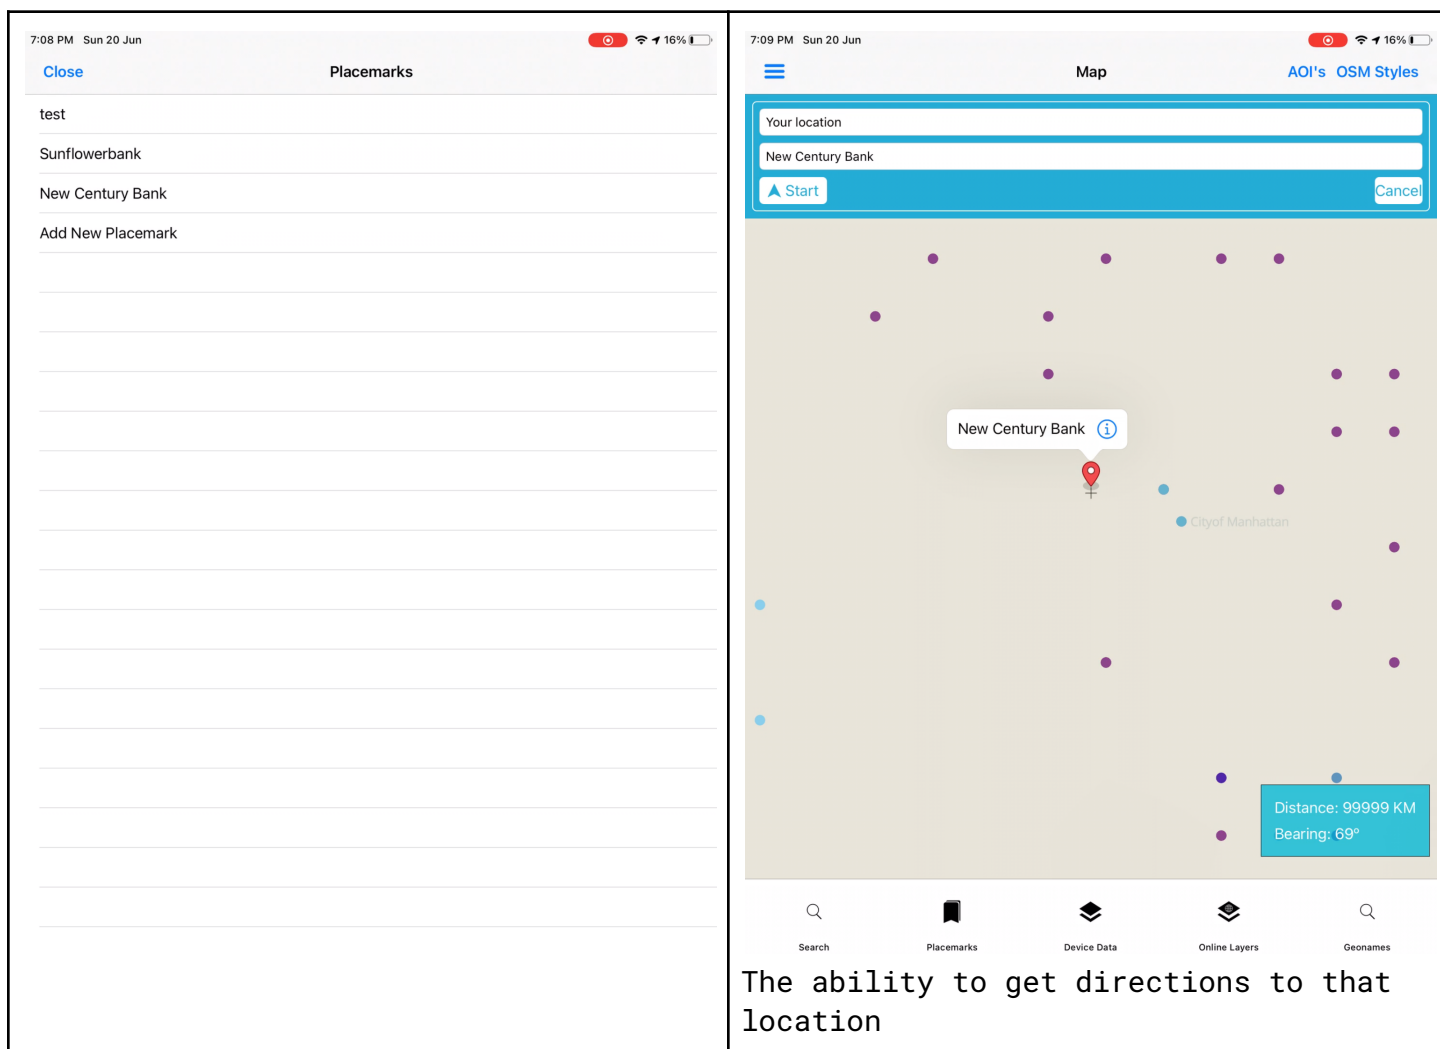

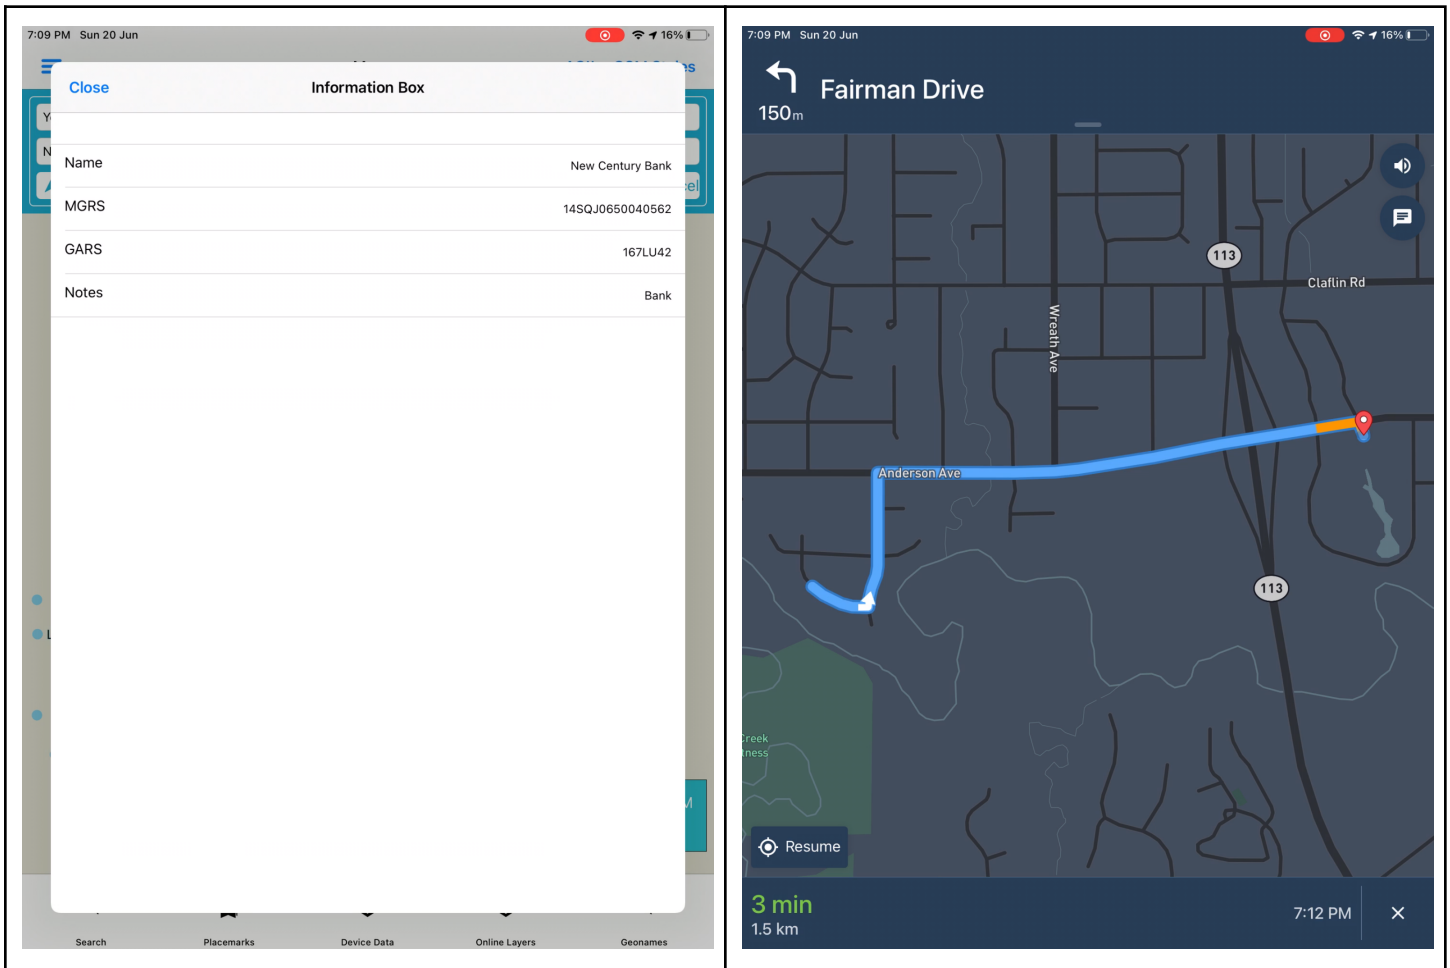

View the detail information and even copy and paste to do a web search in your browser

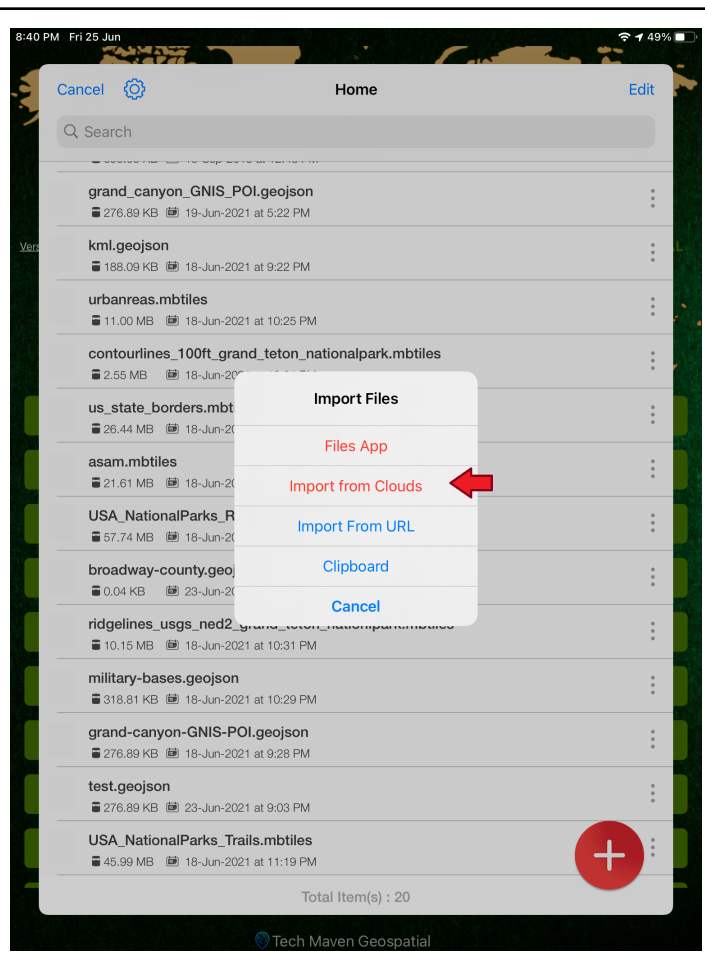

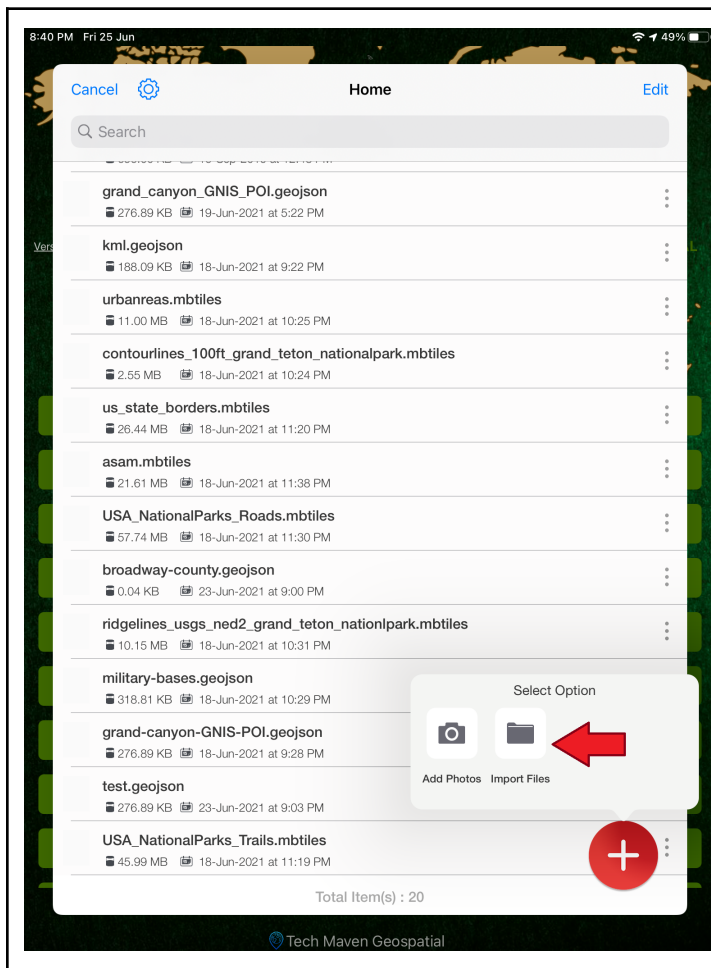

You can save the OSM Point of Interest in

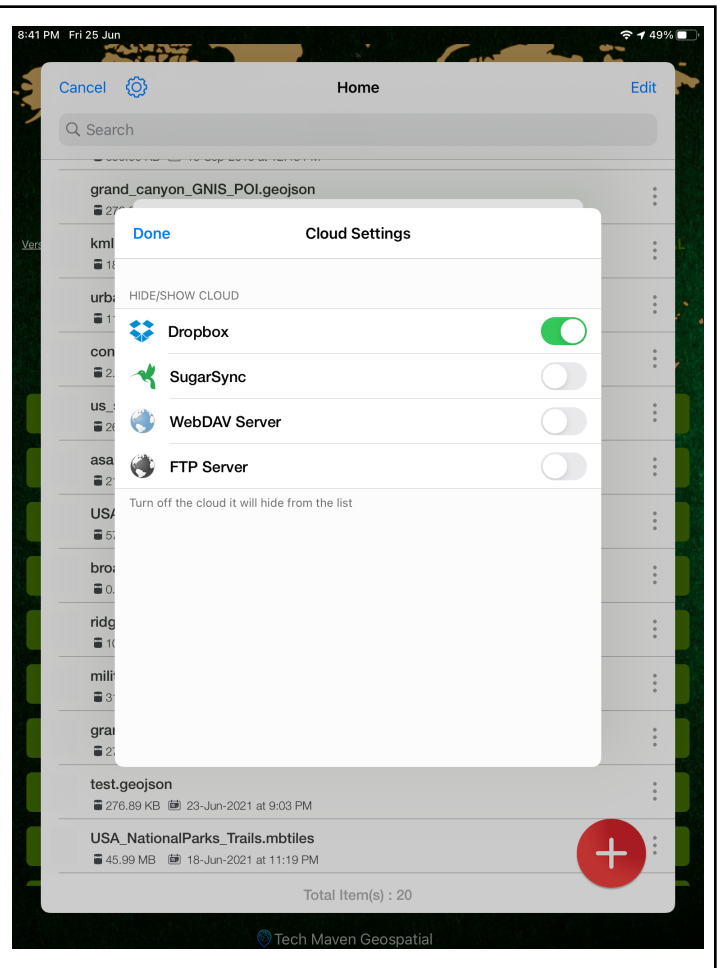

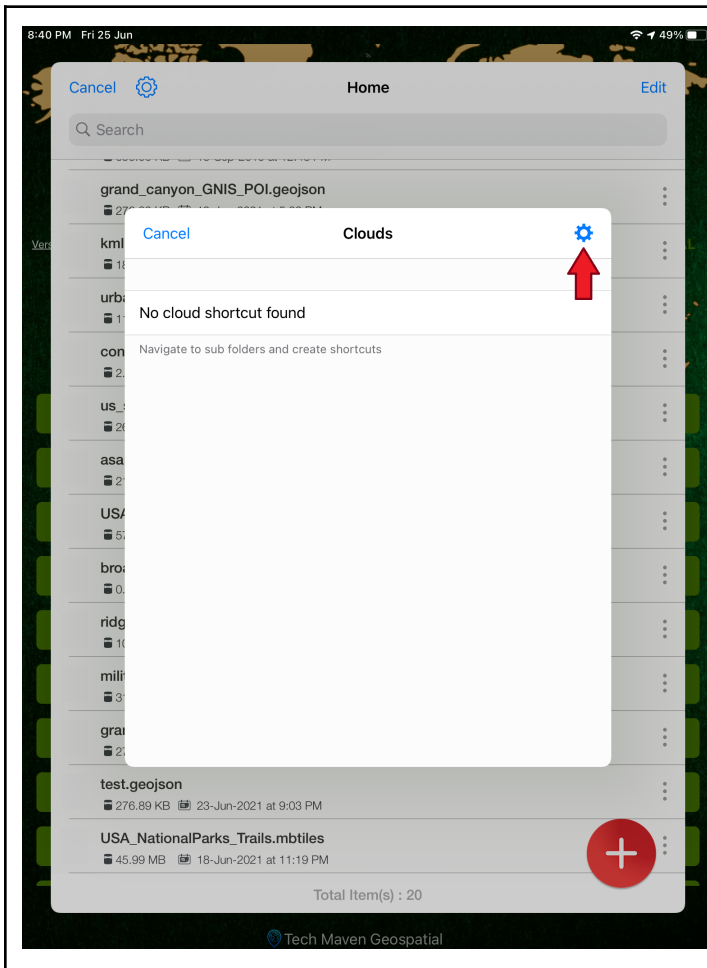

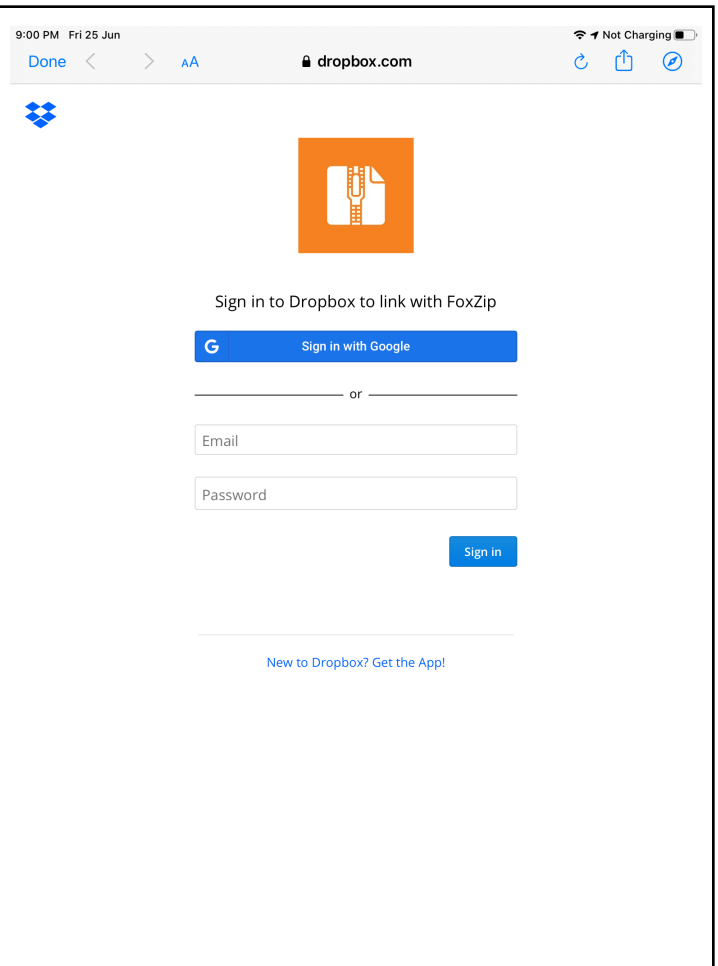

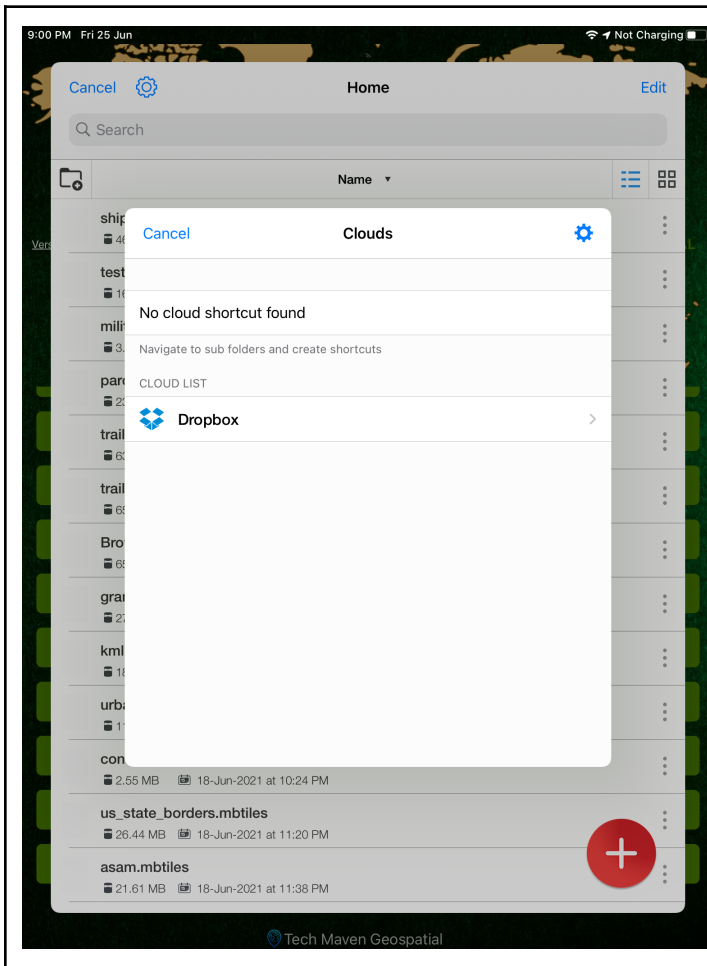

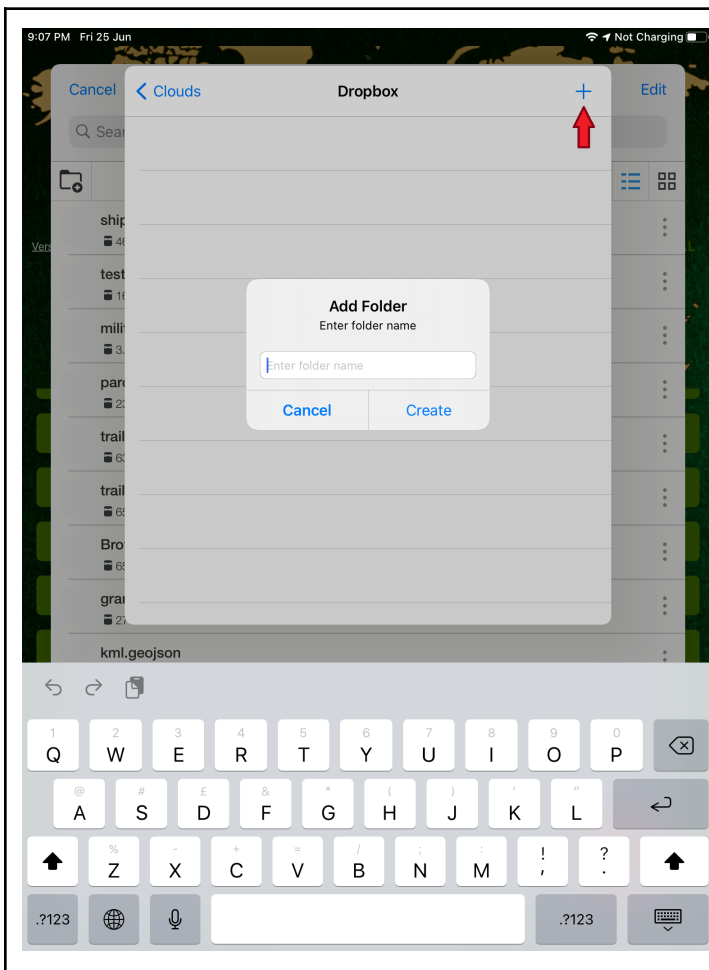

File Manager - Cloud Integration

You can import files (Documents & images) from your directory & clouds(DropBox,Box.Net).

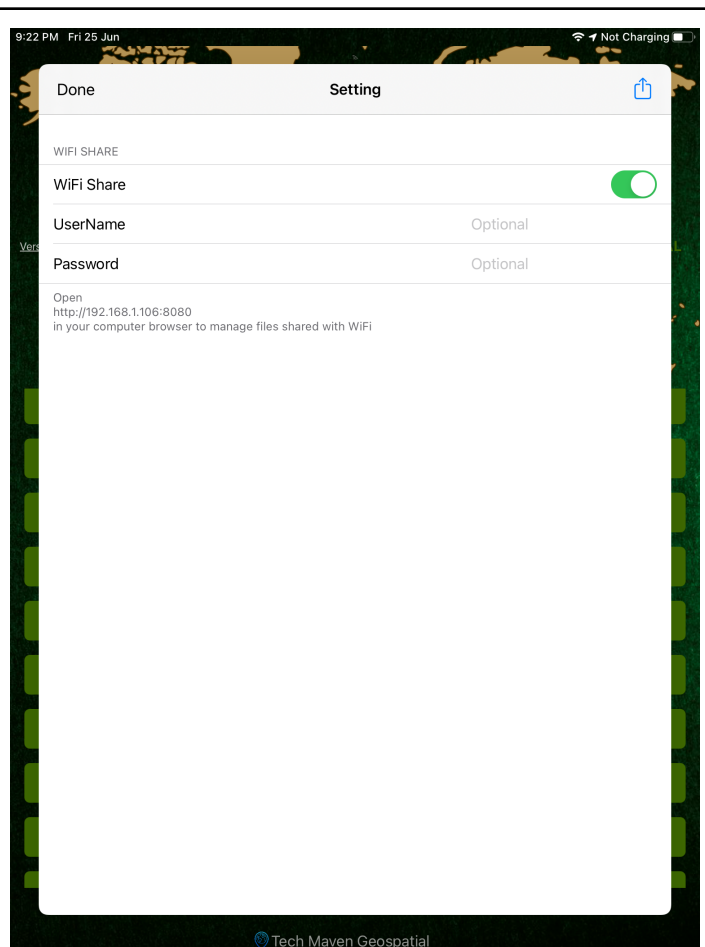

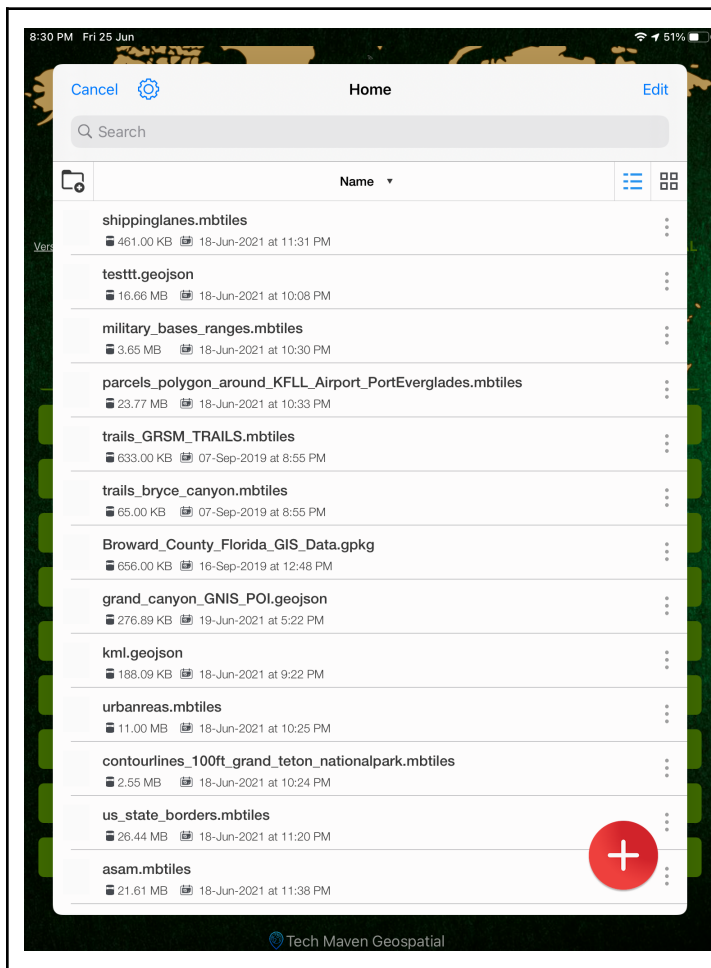

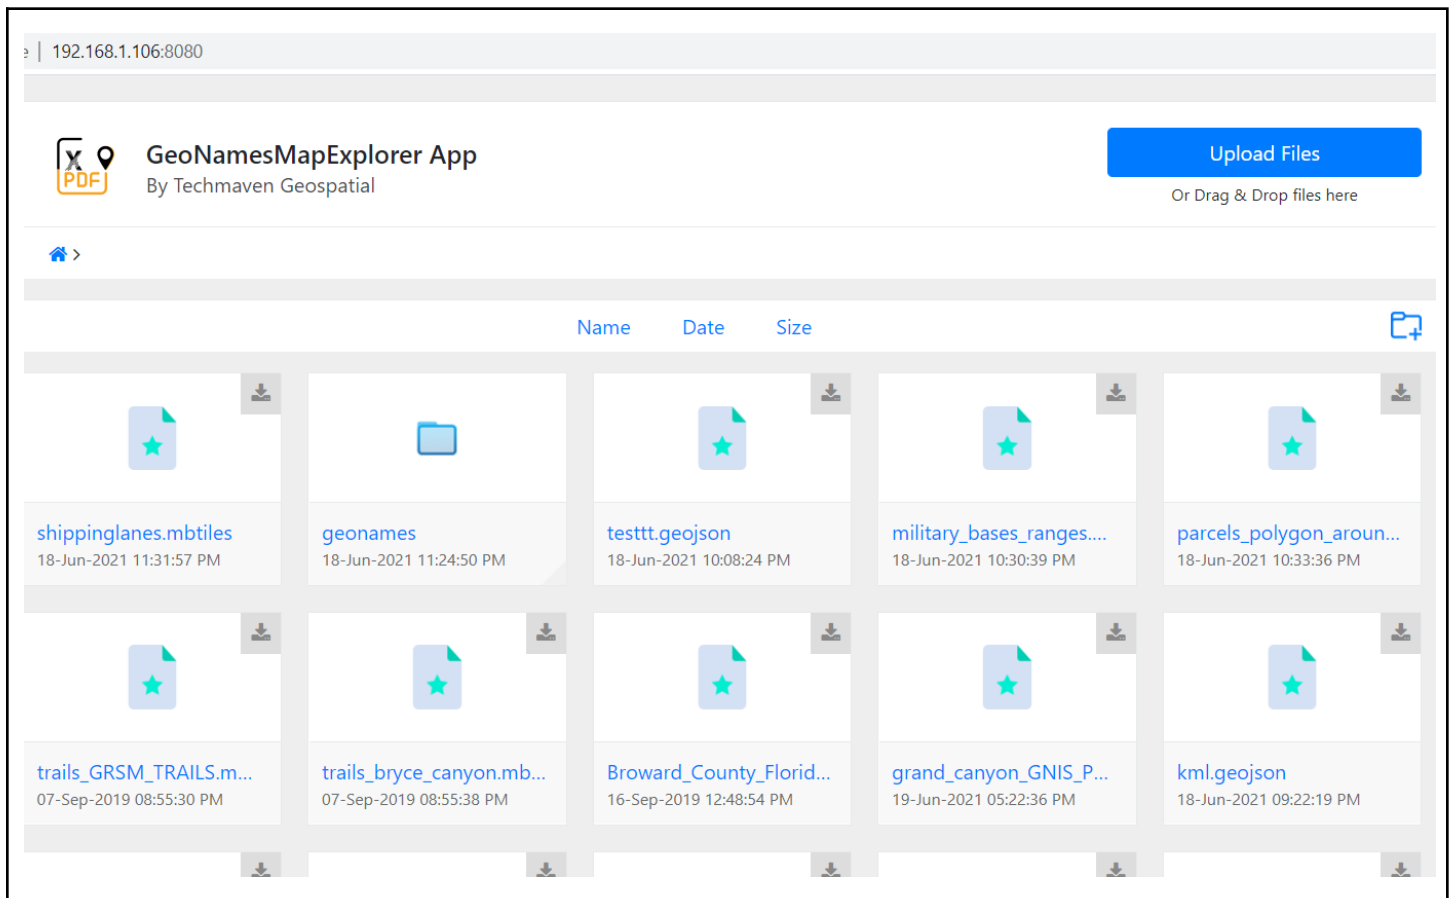

Wifi Sharing

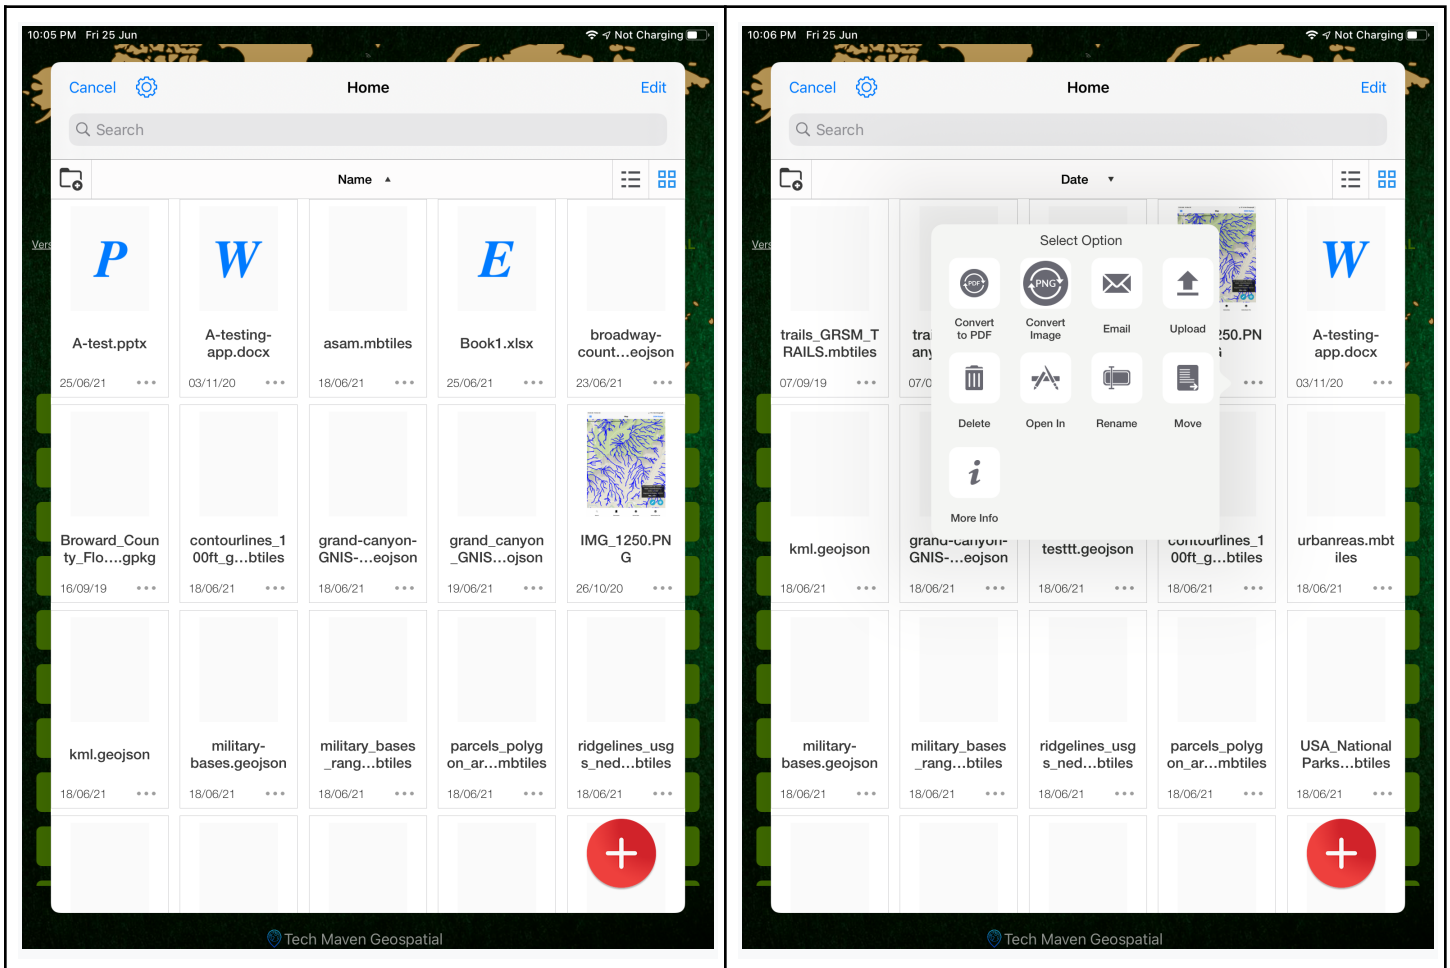

Share Files with devices on the same Wifi network and even allow uploading of files to the iphone/ipad.

View Office Docs (Word/PowerPoint/Excel/PDF) and Image/Photos

App supports file viewer. Users can easily view and sort out all your Office documents (word, powerpoint, excel), including PDFs and images using File Manager.

Last Updated June 25, 2021 for Apple App Store 1.0 version

Document maintained at [Link](#)

Manual is available online at: https://techmavengeo.cloud/manuals/geonames_map_explorer_manual.pdf

The app does NOT collect any user data and does not Report any Geolocation information or any third party analytics or tracking. Any user data loaded stays on the device and never gets uploaded to any servers.

This app and document is exclusively designed for the NGA GEOINT APP STORE and authorized Contractors from Engility/SAIC part of the IGAPP - Innovative GEOINT Application Provider Program that manage the store and app store listing process for the National Geospatial-Intelligence Agency.
